Broadband VNA System

70 kHz to 220 GHz

Millimeter Waveguide VNA System

50 GHz to 1.1 THz

Introduction

Through the use of a novel coaxial-mode interface connector and advanced transceivers, broadband frequency coverage beyond 220 GHz is now possible. The ME7838G allows a continuous, broadband frequency sweep from 70 kHz to 220 GHz without the need to concatenate multiple systems (operational from 40 kHz to 226 GHz). The result is more accurate device characterization from near-DC through the W band and F band frequencies. W band devices can now be characterized beyond the operating frequency of the application for more accurate modeling and higher success rate from the first design turn. The ME7838G fully supports the 3744A-Rx 30 GHz to 125 GHz receiver for noise figure measurements up to 125 GHz. Integrating Anritsu's unique strength in nonlinear transmission line technology (NLTL), the ME7838G system offers many advances in broadband performance over traditional systems including:

- Industry-best broadband frequency coverage, starts at 70 kHz instead of 10 MHz and is operational from 40 kHz to 226 GHz through a single coaxial-mode connector
- Industry-best dynamic range, 120 dB at 10 MHz, 112 dB at 67 GHz, 108 dB at 110 GHz, and 100 dB at 145 GHz
- Industry-best measurement speed, 310 ms for 401 points at 10 kHz IFBW
- Compact, lightweight mmWave modules for easy, precise, and economical positioning on the wafer probe station, 0.6 lb and 1/50 the volume of traditional mmWave modules
- The first millimeter-wave system with real time leveling of power without the need for calibration software correction tables
- Industry-best calibration and measurement stability, 0.1 dB over 24 hrs
- Fully supports tri-axial Kelvin bias tee connections for on-wafer device biasing up to 220 (226) GHz
- Millimeter-wave waveguide coverage to 1.1 THz
- The ME7838AX 125 GHz and ME7838D 145 GHz Broadband systems can be easily upgraded to 220 GHz by incorporating the new Anritsu MA25400A mmWave module

Broadband VNA System 70 kHz to 220 GHz

The ME7838G broadband VNA system provides single sweep coverage from 70 kHz to 220 GHz and is operational from 40 kHz to 226 GHz. It consists of the following items:

- MS4647B VectorStar™ VNA, 70 kHz to 70 GHz with Option 7, Option 70, and Option 80/81
- 3739C Broadband Millimeter-Wave Test Set and Interface Cables
- MA25400A Millimeter-Wave Module, 2 each
- Accessory kit (2000-1956-R) including an interface thru (for connecting between modules), two 1 mm (M) to interface adapters, a 1 mm F-F adapter, extra flange screws, and a torque wrench. See the accessories section for other available adapters.

Millimeter Waveguide VNA System 50 GHz to 1.1 THz

The ME7838G Millimeter-wave configuration provides waveguide output from 50 GHz to 1.1 THz in waveguide bands. The system can extend the broadband system or be configured to operate only as a waveguide system. It consists of the following items:

- MS4647B VectorStar™ VNA, 70 kHz to 70 GHz with Option 7, and Option 82/83
- 3739C Broadband Millimeter-Wave Test Set and Interface Cables
- Millimeter-Wave Module, 2 each
- Accessory kit (2000-1956-R) including an interface thru (for connecting between modules), two 1 mm (M) to interface adapters, a 1 mm F-F adapter, extra flange screws, and a torque wrench. See the accessories section for other available adapters.

Definitions

All specifications and characteristics apply under the following conditions, unless otherwise stated:

Warm-Up Time	After 90 minutes of warm-up time, where the instrument is left in the ON state.
Temperature Range	Over the 25 °C ± 5 °C temperature range.
Error-Corrected Specifications	Error-corrected specifications: over 23 °C ± 3 °C, with < 1 °C variation from calibration temperature. Error-corrected specifications are warranted and include guard bands, unless otherwise stated.
Typical Performance	"Typical" specifications describe expected, but not warranted, performance based on sample testing. Typical performance indicates the measured performance of an average unit and do not guarantee the performance of any individual product. "Typical" specifications do not account for measurement uncertainty and are shown in parenthesis, such as (-102 dB), or noted as Typical.
User Cables/Adapters	Specifications do not include effects of any user cables, adapters, fixtures or other structures attached to the instrument.
Discrete Spurious Responses	Specifications may exclude discrete spurious responses.
Internal Reference Signal	All specifications apply with internal 10 MHz Crystal Oscillator Reference Signal.
Characteristic Performance	Characteristic performance indicates a performance designed-in and verified during the design phase. It does include guard-bands and is not covered by the product warranty.
Below 300 kHz	All uncertainties below 300 kHz are typical.
Recommended Calibration Cycle	12 months
Interpolation Mode	All specifications are with Interpolation Mode Off.
Specifications Subject to Change	All specifications subject to change without notice. For the most current data sheet, please visit the Anritsu

The instrument may be protected by one or more of the following patents: 6894581, 7088111, 7545151, 7683633, 7924024, 8185078, 8306134, 8417189, 8718586, 9103873, 9606212, 9753071, 10225073, 10225073 depending upon the model and option configuration of the instrument.

Specifications for Broadband Configuration

ME7838G Broadband Hardware Configuration

The ME7838G broadband VNA system provides single sweep coverage from 70 kHz to 220 GHz and is operational from 40 kHz to 226 GHz. It consists of the following items:

VNA	MS4647B VectorStar VNA, 70 kHz to 70 GHz with Option 7, Option 70, and Option 80/81/84/85
Test Set	3739C Broadband Test Set and interface cables
mmWave Modules	MA25400A Millimeter-Wave Module, 2 each

The major ME7838G broadband VNA system options are:

Option 2	MS4640B-002 – Time Domain
Option 21	MS4640B-021 – Universal Fixture Extraction
Option 31	MS464xB-031 – Dual Source Architecture
Option 32	MS464xB-032 – Internal RF Combiner
Option 35	MS4640B-035 – IF Digitizer
Option 36	MS4640B-035 – Extended IF Digitizer Memory
Option 41	MS4640B-041 – Noise Figure
Option 42	MS4640B-042 – PulseView™
Option 43	MS4640B-043 – DifferentialView™
Option 44	MS4640B-044 – IMDView™
Option 46	MS4640B-046 – Fast CW
Option 47	MS4640B-047 – Eye Diagram
Option 49	MS4640B-049 – Spectrum Analysis
Option 51	MS464xB-051 – External VNA Direct Access Loops
Option 61	MS464xB-061 – Active Measurement Suite, with 2 Attenuators
Option 62	MS464xB-062 – Active Measurement Suite, with 4 Attenuators
Bias Tees	SC8215 and SC7287 – Kelvin Bias Tees

System and Receiver Dynamic Range, Noise Floor (Referenced to the coaxial mode flange interface on the MA25400A module)

System Dynamic Range	System dynamic range is measured as the difference between maximum port power and the RMS noise floor in a 10 Hz bandwidth and no averaging (ports terminated).
Noise Floor	Noise floor is calculated as the difference between maximum rated port power and system dynamic range.
Receiver Dynamic Range	Receiver Dynamic Range is calculated as the difference between the receiver compression level and the noise floor at Ports 1 or 2.
Normalizing Measurement	Normalizing measurement made with a through line connection, with its effects compensated for. The cables between the VNA and the MA25400A modules are assumed to be among those offered by Anritsu. All values are typical.

Test Port Power, Receiver Compression (Referenced to the coaxial-mode flange interface on the MA25400A module)

Port power control is provided by the base VNA for frequencies below 54 GHz, and by the MA25400A mmWave module for frequencies greater than 54 GHz. Receiver compression point is defined as the port power level beyond which the response may be compressed more than 0.2 dB relative to normalization level. 10 Hz IF bandwidth used to remove high level noise effects. Power measured with traditional thermal power sensors below 125 GHz and with a calibrated calorimeter-style power meter at higher frequencies. All values are typical.

Measurement Uncertainties – SOLT/SSST

The graphs give measurement uncertainties after the above calibration at a port power of -18 dBm. The component uncertainties are combined based on their characteristics: residual directivity, load and source match, tracking, network analyzer dynamic accuracy and connector repeatability are assumed to be fully correlated while noise effects (high level noise and noise floor effects) are assumed to be internally uncorrelated and uncorrelated with the first group of terms. 10 Hz IF Bandwidth is used. For transmission uncertainties, it is assumed that $S_{11} = S_{22} = 0$. For reflection uncertainties, it is assumed that $S_{21} = S_{12} = 0$. For other conditions, please use our free Exact Uncertainty calculator software, downloadable from the Anritsu web site at www.anritsu.com.

Measurement Uncertainties – SOLT/SSST

The graphs give measurement uncertainties after the above calibration at port power of -10dBm. The errors are worst case contribution of residual directivity, load and source match, frequency response and isolation, network analyzer dynamic accuracy, and connector repeatability while noise effects are added on an RSS basis. 10 Hz IF Bandwidth is used. For transmission uncertainties, it is assumed that $S_{11} = S_{22} = 0$. For reflection uncertainties, it is assumed that $S_{21} = S_{12} = 0$.

SC8215 and SC7287 Kelvin Bias Tees

When connected to the Source input of the MA25400A module, provides Sense and Force SMC connections 1.5 in from the test port to minimize the IR drops associated with the impedances between the bias tee and the DUT.

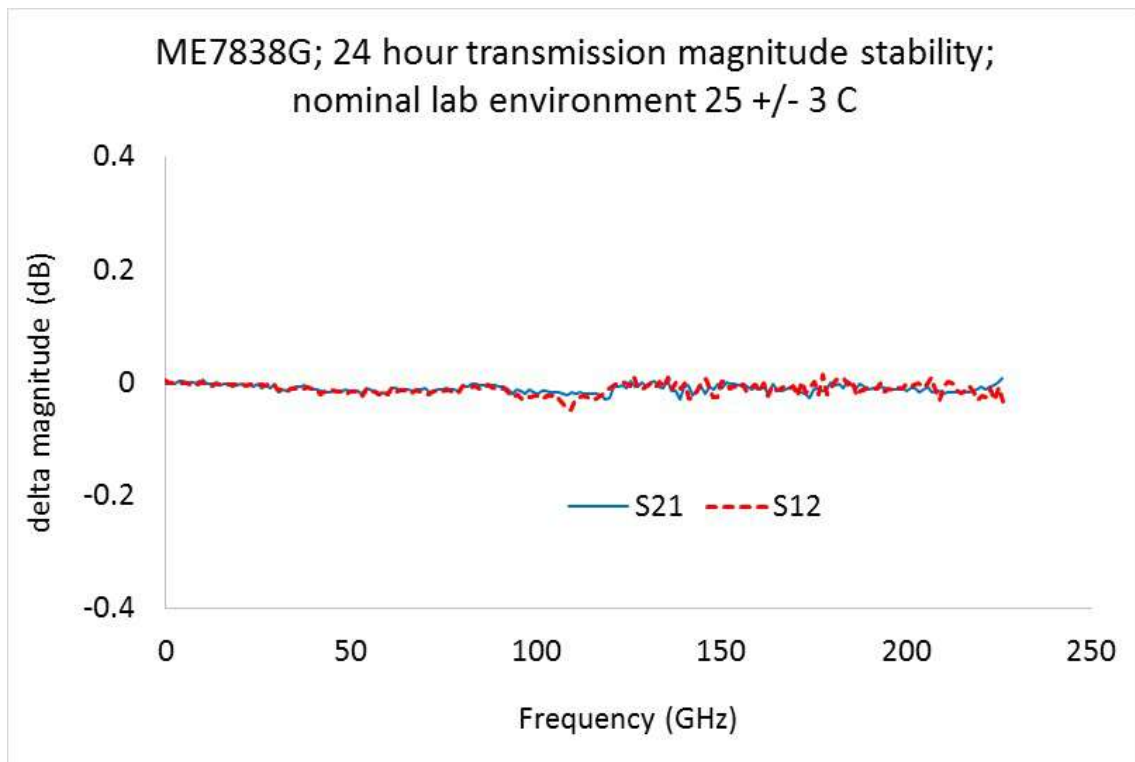

Part Number	Description	Voltage	Current	Bias Leakage Current (avg, typ) (bias tee mounted on NLTL module) (typ. operating temp.)
SC8215	The SC8215 is a V-connectorized bias tee used at the rear of the module. This allows for bias while performing measurements from 70 kHz to the maximum frequency of the MA25400A module. Stand-alone, it is usable to 70 GHz.	Max Voltage: 16 VDC	Max Current: 100 mA	1 pA @ 1 VDC 16 pA @ 16 VDC
SC7287	The SC7287 is a V-connectorized bias tee used at the rear of the module. This allows for bias while performing measurements from 100 MHz to the maximum frequency of the MA25400A module. Stand-alone, it is usable to 70 GHz.	Max Voltage: 50 VDC	Max Current: 500 mA	1 pA @ 1 VDC 50 pA @ 50 VDC
Tri-Axial Output SMUs	For applications requiring Source Measure Units (SMU) with tri-axial outputs, a tri-axial (male) to SMC (male) cable is available, with the inner-shield isolated from ground at the bias tee SMC end, to float at the SMU guard potential. Check the accessories list for ordering information on page 36 .			

Broadband Measurement Examples

The following figures are measurement examples of the ME7838G Broadband system performance. They do not represent specified performance, but serve to indicate common trends with frequency or power of several parameters of interest.

Specifications for Waveguide Band Configuration

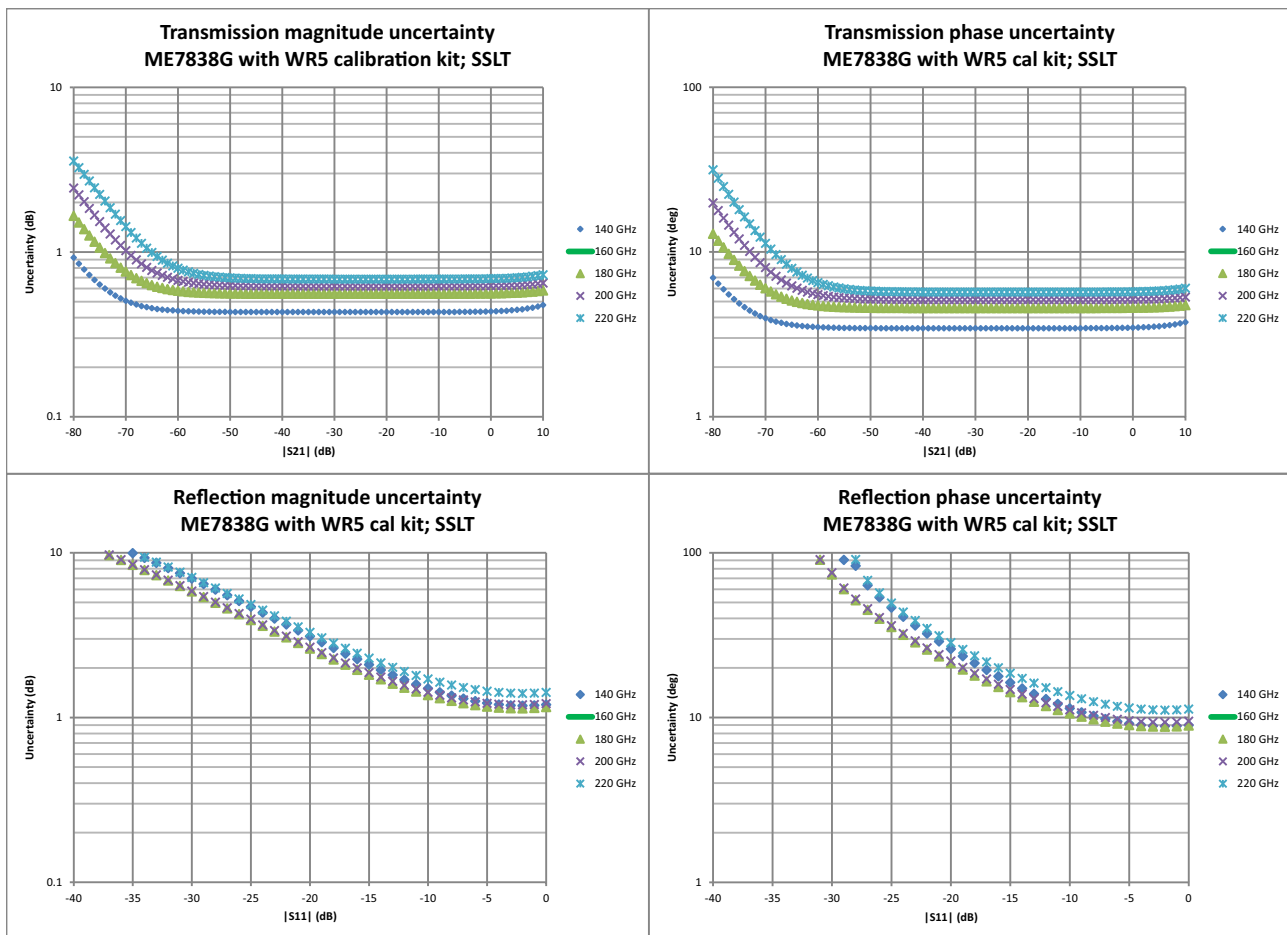

ME7838G Millimeter-Wave VNA, Waveguide Bands

Three configurations are available for waveguide band operation above 145 GHz when using the ME7838G system.

- First, the MA25400A Broadband Millimeter-Wave module can be adapted to waveguide measurements using an available WR5 adapter. Lower band coaxial-to-waveguide adapters can be used in conjunction with the native 0.8 mm and 1 mm coaxial adapters for the MA25400A to cover lower waveguide band measurements.
- Second, the Anritsu 3744A-EE or 3744A-EW millimeter-wave module can be used. These version modules operate in the extended E and W waveguide bands and are operational using the MS4644B or MS4647B VectorStar (with Options 8x and 7) and the 3739C broadband/millimeter-wave test set.
- The third configuration option is to use external millimeter-wave modules with any model VectorStar (with Options 8x and 7) and the 3739C test set. For millimeter bands either the OML or VDI modules may be used.

Typical uncertainty curves and residual values are below for the first case where WR5 adapters are used on the MA25400A modules. These results were obtained using an SSLT calibration with an OML WR05 calibration kit. Other calibration kits with similar dimensional tolerances can perform similarly. Standard waveguide screw torque levels (6 cN-m) were used.

Frequency Range	Directivity and Load Match	Source Match	Reflection Tracking	Transmission Tracking

> 160-200 GHz	33	28	0.15	0.15
> 200-220 GHz	30	26	0.2	0.2

ME7838G with Option 41/48 and 3744A-Rx mmWave Noise Figure Measurements

ME7838G with 3744A-Rx Receiver Module

The 3744A-Rx receiver module can be used with Option 41, Noise Figure, and the ME7838G mmWave or broadband system to perform mmWave noise figure measurements from 30 GHz to 125 GHz. The receiver bypasses the internal couplers (see block diagram), maximizing the noise figure of the receiver for optimum noise figure measurement accuracy. The receiver is derived from the 3743AX mmWave module and utilizes the same nonlinear transmission line technology for optimum mmWave performance. Using the advantages of the 3743AX mmWave module system architecture provides a unique solution to mmWave noise figure measurements previously unavailable. Receiver modules with different bandwidth ranges are available. Consult the factory for more information.

With Option 48, differential (and common-mode) noise figure measurements are possible in the same wide frequency ranges. In this case, two 3744A-Rx modules (along with needed pre-amplifiers/filters) are used to complete the differential receiver. While usually a 4-port system is used, a 2-port ME7838G can be used for the noise measurements as long as DUT gain information is available.

Block Diagram – 3744A Receiver Module

The 3744A-Rx receiver module is optimized as a receiver-only mmWave module for applications such as mmWave antenna measurements and mmWave noise figure measurements. Elimination of the input coupler produces a mmWave receiver with excellent noise floor sensitivity and dynamic range. When coupled with a composite receiver, the receiver module provides a solution for mmWave noise figure measurements.

As with all cold source method noise figure measurements, the output of the DUT is first sent to an external composite receiver for pre-amplification. This ensures that the system noise figure is minimized for optimum measurement accuracy.

3744A-Rx Block Diagram configured for mmWave noise figure measurements

3744A-Rx Receiver Compression, Noise Floor

Receiver Compression Point is defined as the port power level beyond which the response may be compressed more than 0.2 dB relative to the normalization level. 10 Hz IF bandwidth is used to remove trace noise effects. All typical.

Noise Floor is relative to the receiver power calibration performed at -10 dBm. Typical.

VectorStar ME7838G Waveguide Bands from 50 GHz to 1.1 THz

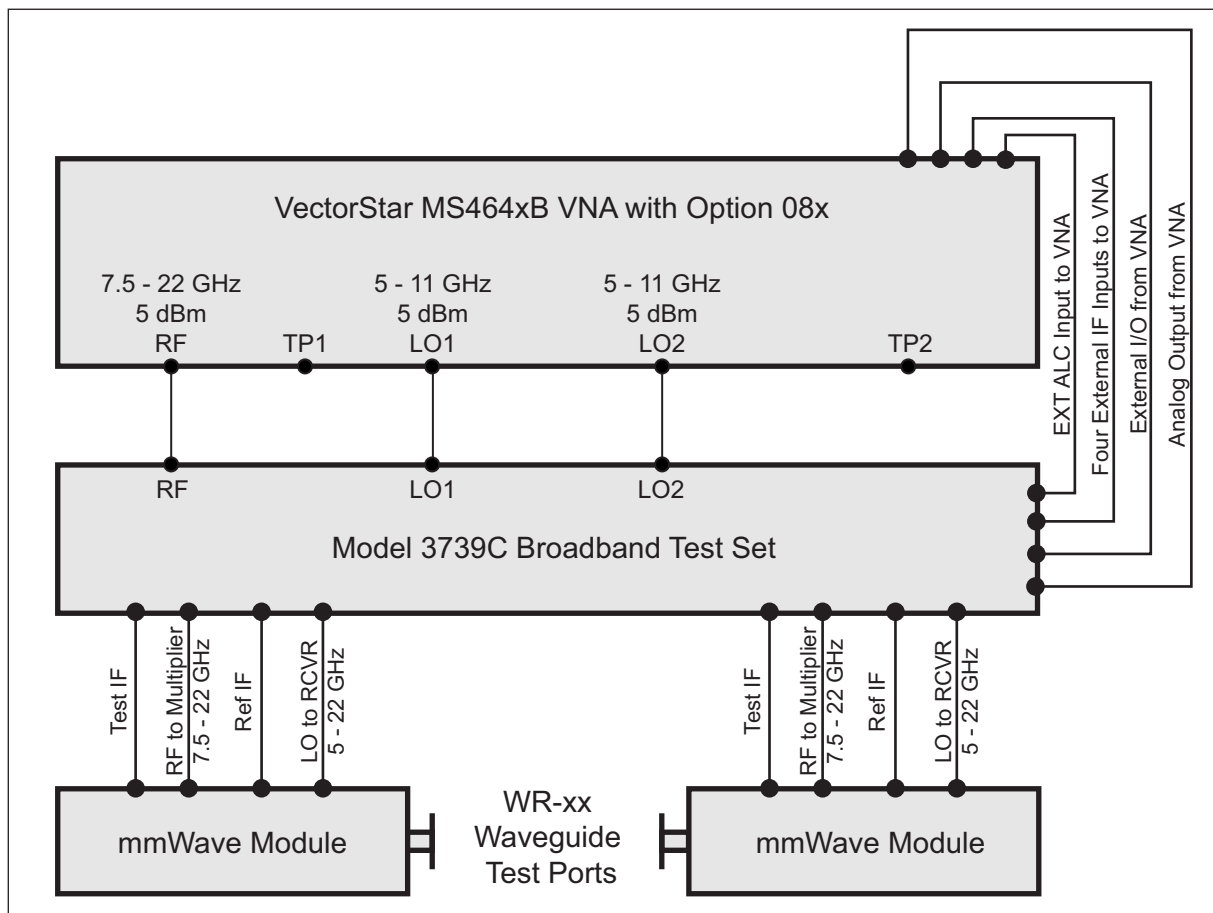

The VectorStar Millimeter-Wave system supports OML or VDI modules starting at 50 GHz. System performance is based on the specific mmWave module installed and appropriate cal kit. The mmWave modules need to provide IF levels of -15 dBm to -5 dBm when the RF drive is set to maximum in order to deliver specified dynamic range. Contact the vendor web site for additional information.

NOTE: The 3739C test set requires an IF power level in the -15 dBm to -5 dBm from 10 to 20 MHz. For existing mmWave modules, be sure to confirm output power to meet specified performance.

System Configuration with VDI Modules

The VectorStar Millimeter-Wave system provides control of VDI modules for frequency extension coverage up to 1.1 THz*. MS4640B series VectorStar VNA may be configured for mmWave operation by adding the appropriate control option and test set. System requirements include:

- VectorStar VNA Model: MS4642B, MS4644B, or MS4647B
(Note: For 1.1 THz operation, the 40 GHz MS4644B or higher model is required.)
- Options: MS4640B Option 7, Receiver Offset
MS4640B Option 80, 81, 82, 83, 84, or 85 (86-89 acceptable for some modules)
- Test Set: 3739C Test Set
- Cable: SM6537 Interface Cable – Connection between VectorStar and the VDI mmWave module is provided with this interface cable.
Each VDI module is equipped with a dedicated external power supply and DC cable.
NOTE: The 3739C test set requires an IF power level in the -15 dBm to -5 dBm from 10 to 20 MHz.
For existing mmWave modules, be sure to confirm output power to meet specified performance.

VDI Module Specifications

- Specifications: Dynamic range (DR) specifications are valid for any MS4640B VectorStar VNA with appropriate options. Directivity specifications are valid when using appropriate VDI calibration kits. These specification results assume a through measurement with two TxRx Heads. All extender heads include a precision Test Port. The specifications here are typical and subject to change.
- Stability: Measured for 1 hour after a 1 hour system warm-up, in a stable environment with ideal cables.
- Dynamic Range: The dynamic range (RBW 10 Hz) is measured by first connecting two TxRx heads together and normalizing the un-calibrated S21 and S12. The heads are then disconnected and terminated with a waveguide short. The rms of the measured S21 & S12 give the system dynamic range.
- Test Port Power: Test Port Power is typical. Reduced power is possible at band edges.

a. Mini versions of these modules are available with higher port power and dynamic range.

b. Test Port Input Limits are shown for standard test port power models only.

VDI Module Head Configurations

- TxRx: Transmitter with two receivers (reference and measurement), and two couplers. Two TxRx heads are required for full two-port measurements.
- TxRef: Transmitter with reference receiver and one coupler.
- Rx: Measurement receiver.
- Tx: Transmitter.

VDI Module Options

- Micrometer-Drive Variable Attenuator: A 0 dB to 30 dB micrometer-drive variable attenuator option is available on TxRx and Tx modules up through WR1.5. If ordered, "-Attn" is added as an option suffix to the module model number. The attenuators reduce TPP and DR by as much as 8 dB in the WR3.4 and higher frequency bands and add approximately 2 in to the enclosure.
- Increased Test Port Power: Options exist for increasing test port power in some full bands or in partial bands. Consult factory for more information.
- Non-Standard Frequency Bands: Non-standard frequency bands or other specific needs are possible. Consult factory for more information.
- Custom Configuration: Anritsu/VDI will work with customers to reconfigure any extender to meet specific needs.

- c. As there are no internationally recognized power standards above 110 GHz, any power data supplied above 110 GHz is traceable only to OML's calorimeter.
- d. Not Tested.
- e. Measured at 10 Hz IF bandwidth.
- f. At +25 °C. Measured for 1 hr after 1 hr warm-up. Based on "perfect" RF and LO test cables not moved after warm-up and calibration. Not tested.
- g. Height excludes the adjustable rubber feet; length and depth dimensions exclude the output waveguide length.

Calibration and Correction Capabilities

Calibration Methods	<p>Short-Open-Load-Through (SOLT) with Fixed or Sliding Load and supporting .s1p-defined cal kits</p> <p>Offset-Short-Offset-Short-Load-Through (SSLT) with Fixed or Sliding Load</p> <p>Triple-Offset-Short-Through (SSST) and overdetermined offset short (mSSST)</p> <p>Short-Open-Load-Reciprocal (SOLR) or Unknown Through Method (SSLR, SSSR)</p> <p>Line-Reflect-Line (LRL) / Line-Reflect-Match (LRM) – (up to 5 bands supported for multi-line configurations)</p> <p>Thru-Reflect-Line (TRL) - (up to 5 bands supported)</p> <p>Advanced-LRM (A-LRM™) for improved on-wafer calibrations</p> <p>Multiline TRL (mTRL)</p> <p>Hybrid calcs (allows combination of sub-cals of different type or media)</p> <p>AutoCal™</p> <p>Thru Update available</p> <p>Secondary match correction available for improved low insertion loss measurements</p>
Correction Models	<p>2-Port (Forward, Reverse, or both directions)</p> <p>1-Port (S_{11}, S_{22}, or both)</p> <p>Transmission Frequency Response (Forward, Reverse, or both directions)</p> <p>Reflection Frequency Response (S_{11}, S_{22}, or both)</p>
Merged Calibration	<p>Merge multiple calibration methods over bands of frequency points.</p> <p>Note that merge does not need to be used for broadband coaxial (SOLT/R-SSST/R) 1 mm or 0.8 mm calibrations using Anritsu calibration kits. These can be done as one unified calibration.</p>
Coefficients for Calibration Standards	<p>Use the Anritsu calibration kit USB Memory Device to load kit coefficients and characterization files.</p> <p>Enter manual coefficients into user-defined locations.</p> <p>Use complex load models.</p>
Reference Impedance	<p>Modify the reference impedance from 50 Ω to any impedance greater than 0 Ω.</p>
Interpolation	<p>Allows interpolation between calibration frequency points. Accuracy will be reduced at non-calibration frequencies and that degradation is dependent on the frequency step size in the initial calibration and the electrical length of the user’s setup.</p>
Adapter Removal Calibration	<p>Characterizes and “removes” an adapter that is used during calibration that will not be used for subsequent device measurements; for accurate measurement of non-insertable devices.</p>
Dispersion Compensation	<p>Selectable as Coaxial, other non-dispersive (e.g., for coplanar waveguide), Waveguide, or Microstrip.</p>
Power	<p>Power Meter Correction Different power meter calibrations are available to enhance power accuracy at the desired reference plane. The source power will match the target calibration power, as read by the power meter, to within ~0.1 dB for short periods of time (determined by thermal drift of the system and the power meter). The absolute accuracy of the calibrated power will be dependent on the power meter and sensor used.</p> <p>Flat Power Calibrations A flat power calibration (when in frequency sweep mode) is available at a user-selectable power level, if it is within the power adjustment range of the internal source. The flat power correction is applied to other power levels directly as an offset. Multiple power meters/sensors may be needed depending on the frequency range. An adapter may be required to the 1mm module test port.</p> <p>Linear Power Calibrations A linear power calibration is performed over a range of power levels for use in power sweep mode and is performed at a specified frequency or frequency range (for multifrequency gain compression).</p> <p>External Power Meter Both calibrations are performed using an external power meter (Anritsu ML243xA, ML248xB, ML249xA, Agilent 437B (or equivalent), Keysight N191XA/EPM Series, Rhode and Schwarz NRP2 meter with a broadband 110 GHz sensor, or Elva DPM power meter) over the Dedicated GPIB port, or a USB power sensor (Anritsu MA24106A, MA24108A, MA24118A, MA24126A, MA24208A, MA24218A, MA24330A, MA24340A, MA24350A, MA24507A, or MA24510A, or Erickson PM5x meter) connected to a USB port.</p> <p>Note: Usage of the MA24500A series sensor requires a dual USB Type A male to single USB Type A female cable to supply needed current draw. Because of certain bandwidth requirements, the MA24500A series can only be used for power calibrations above nominally -35 dBm on VectorStar. Accuracy with the MA24500A series of sensors (when used with VectorStar) may be degraded below 1 MHz.</p>
Embedding/De-embedding	<p>The MS4640B is equipped with an Embedding/De-embedding system.</p> <p>De-embedding De-embedding is generally used for removal of test fixture contributions, modeled networks and other networks described by S-parameters (s2p files) from measurements.</p> <p>Embedding Similarly, the Embedding function can be used to simulate matching circuits for optimizing amplifier designs or simply adding effects of a known structure to a measurement.</p> <p>Multiple Networks Multiple networks can be embedded/de-embedded and changing the port and network orientations is handled easily.</p> <p>Extraction Utility An extraction utility is part of this package that allows the easier computation of de-embedding files based on some additional calibration steps and measurements.</p>
Impedance Conversion	<p>Allows entry of different impedances (complex values) for different ports.</p>

Mechanical Calibration/Verification Kits

W1 (1 mm) Calibration/Verification Kit, 3656C

Provides 12-term SOLT or Triple Offset Short calibrations, for W1 1 mm devices, and two verification standards.

The standard 3656C and 3656C-3 kits include calibration and verification (18WWF50A-1 and -1B) components and verification characterization data. The 3656C-5 and 3656C-6 kits include only the calibration components. 3656C-3 and 3656C-6 kits have the calibration components defined with .s1p (tabular) files as well as with the model-based .ccf files.

a. SC connectors are a solution for accurate calibrations for non-insertable 1 mm devices. Users can change the gender of the SC connector using the provided tool, pin, sliders, and locking keys to ensure the best pin-depth, thus calibrations are valid after changing the gender of the adapter.

Information on Using MA25400A-specific Adapters

The flange-based RF coaxial interface is a unique test port that enables simple direct connection to broadband RF probes. There are times when it is desirable to adapt to other media and the adapters listed below can help.

To do direct 1 mm coaxial S-parameter measurements: use the 33WG50 adapters. Additional 1 mm adapters are in the 3656 series calibration kit. Two of the 33WG50 adapters are included in the ME7838G system accessory kit.

To do direct 0.8 mm coaxial S-parameter measurements and verifications: use the 33.8G50 adapters. Additional 0.8 mm adapters are in the 3659 calibration kit.

To do direct WR-5 waveguide S-parameter measurements and assurance tests: use the 35WR5G adapters.

To do simple, direct broadband measurements in the native interface: use the 33GG50 thru. One of these thrus is included in the ME7838G system accessory kit.

To do power calibrations: At a minimum, the 33WG50 and 35WR5G adapters are needed to cover the full frequency range of the instrument (using 3-4 power meters). The 35WR6GB adapter bundle can be used for additional flexibility for calibrations including parts/all of the 110-170 GHz range. Power calibrations over subsets of the range may only need one adapter depending on the frequencies involved. Adapter loss can be de-embedded using the power calibration embedding/de-embedding tools and generic adapter .s2p files provided by Anritsu (or the individual adapters can be user-characterized directly for even greater accuracy). Please refer to the VectorStar Calibration and Measurement Guide (P/N: 10410-00318) for more information.

External Power Meters/Sensors

ML243xA	CW Power Meter, Single Input or Dual Input Recommended Power Sensors: • SC7770 • MA247xD • MA244xD • MA248xD • MA2400xA
ML248xB	Wideband Power Meter, Single Input or Dual Input Recommended Power Sensors: • MA249xA • MA2411B
ML249xA	Pulse Power Meter, Single Input or Dual Input Recommended Power Sensors: • MA249xA • MA2411B
MA24106A	USB Power Sensor, 50 MHz to 6 GHz
MA24108A	USB Power Sensor, 10 MHz to 8 GHz
MA24118A	USB Power Sensor, 10 MHz to 18 GHz
MA24126A	USB Power Sensor, 10 MHz to 26 GHz
MA24330A	USB Power Sensor, 10 MHz to 33 GHz
MA24340A	USB Power Sensor, 10 MHz to 40 GHz
MA24350A	USB Power Sensor, 10 MHz to 50 GHz
MA24507A	Power Master™ Frequency Selectable mmWave Power Analyzer, 9 kHz to 70 GHz
MA24510A	Power Master™ Frequency Selectable mmWave Power Analyzer, 9 kHz to 110 GHz Note that usage of the MA24507A or MA24510A Power Master™ sensor requires connection to two USB ports to supply needed current draw.

Test Port Cables, Flexible, High Performance

3671W1-50-1	1.0 mm (male) to 1.0 mm (female), 1 each, 10.0 cm (3.9 in)
3671W1-50-2	1.0 mm (male) to 1.0 mm (female), 1 each, 13.0 cm (5.1 in)
3671W1-50-3	1.0 mm (male) to 1.0 mm (female), 1 each, 16.0 cm (6.3 in)
3671KFS50-60	K (female) to 3.5 mm (male) cable, 60 cm (one cable)
3671KFK50-60	K (female) to K (male) cable, 60 cm (one cable)
3671KFK50-100	K (female) to K (male) cable, 1 each, 100 cm (one cable)
3671KFKF50-60	K (female) to K (female) cable, 1 each, 60 cm (one cable)
3671VVF50-60	V (female) to V (male) cable, 1 each, 60 cm (one cable)
3671VVF50-100	V (female) to V (male) cable, 1 each, 100 cm (one cable)
3671KFSF50-60	K (female) to 3.5 mm (female) cable, 1 each, 60 cm (one cable)
3671VVF50-60	V (female) to V (female) cable, 1 each, 60 cm (one cable)
3671VVF50-100	V (female) to V (male) cable, 1 each, 60 cm (one cable)
3670.850-1	0.8 mm (male) to 0.8 mm (female), 1 each, 10.0 cm (3.9 in)
3670.850-2	0.8 mm (male) to 0.8 mm (female), 1 each, 16.0 cm (6.3 in)

Adapters

0.8-105F	0.8 mm (female) Sparkplug Launcher Connector, DC to 145 GHz
0.8-105M	0.8 mm (male) Sparkplug Launcher Connector, DC to 145 GHz
34WV50	1.0 mm (male) to V (male) Adapter, 1.0 mm to V, Coaxial
34WVF50	1.0 mm (male) to V (female) Adapter, 1.0 mm to V, Coaxial
34WVF50	1.0 mm (female) to V (male) Adapter, 1.0 mm to V, Coaxial
34WVF50	1.0 mm (female) to V (female) Adapter, 1.0 mm to V, Coaxial
33WW50	1.0 mm (male) to 1.0 mm (male) Adapter, 1.0 mm in-series, Coaxial
33WWF50	1.0 mm (male) to 1.0 mm (female) Adapter, 1.0 mm in-series, Coaxial
33WVF50	1.0 mm (female) to 1.0 mm (female) Adapter, 1.0 mm in-series, Coaxial
33WG50	MA25400A Flange Interface to 1 mm (male) Adapter
33.8WG50	MA25400A Flange Interface to 0.8 mm (male) Adapter
35WR5G	MA25400A Flange Interface to WR5 Waveguide Adapter
35WR6GB	MA25400A Flange Interface to WR6 Waveguide Adapter bundle (includes shim adapter and 50mm length of WR6 waveguide)
35WR10W	WR10 to 1.0 mm (male) Adapter, 1.0 mm to WR10 Waveguide
35WR10WF	WR10 to 1.0 mm (female) Adapter, 1.0 mm to WR10 Waveguide
SC7260	WR12 to 1.0 mm (male) Adapter, 1.0 mm to WR12 Waveguide
SC7442	WR12 to 1.0 mm (female) Adapter, 1.0 mm to WR12 Waveguide
35WR15V	WR15 to V (male) Adapter, V (1.85 mm) to WR15 Waveguide
35WR15VF	WR15 to V (female) Adapter, V (1.85 mm) to WR15 Waveguide
For More Information	Refer to Precision RF & Microwave Components Catalog for descriptions of adapters and other components.

Miscellaneous Components

41W-3	Attenuator, DC to 110 GHz, 0.2 W, 3 dB, W1(m) to W1(f), 50 Ω
41W-6	Attenuator, DC to 110 GHz, 0.2 W, 6 dB, W1(m) to W1(f), 50 Ω
41W-10	Attenuator, DC to 110 GHz, 0.2 W, 10 dB, W1(m) to W1(f), 50 Ω
W240A	Precision Power Divider, DC to 110 GHz, W1(f) input, W1(f) outputs, 3 resistor, 50 Ω
W241A	Precision Power Splitter, DC to 110 GHz, W1(m) input, W1(f) outputs, 2 resistor, 50 Ω
MN25110A	Precision Directional Coupler, 20 GHz to 110 GHz, W1(f) input, W1(f) output, W1(f) coupled port, 50 Ω
33GG50	MA25400 Flange Interface 50 mm Thru Line (male-male)

Accessories

SC8215	Kelvin Bias Tee, 70 kHz to the maximum frequency of the MA25400A module (connects to the SRC port of the module), Max Voltage: 16 VDC, Max Current: 100 mA
SC7287	Kelvin Bias Tee, 100 MHz to the maximum frequency of the MA25400A module (connects to the SRC port of the module), Max Voltage: 50 VDC, Max Current: 500 mA
SC8218	Triax (male) to SMC (male) Cable, (Inner-shield floating at SMC end), 1.5 m (60 in) long two (2) needed per Kelvin Bias Tee
SM6494	System floor console (includes larger size writing table)
2100-1-R	GPIB cable, 1 m (39 in) long
2100-2-R	GPIB cable, 2 m (79 in) long
2100-4-R	GPIB cable, 4 m (157 in) long
806-209-R	Flexible Coaxial Cable, DC to 70 GHz, 36 in (91.5 cm), V(m) – V(f), 50Ω for connecting the VNA and the MA25400A Modules
806-396-R	Flexible Phase Stable Coaxial Cable, DC to 70 GHz, 36 in (91.5 cm), V(m) – V(f), 50Ω for connecting the VNA and the MA25400A Modules
01-201	Torque Wrench (for tightening male devices), 8 mm (5/16 in), 0.9 N·m (8 lbf·in) for SMA, 3.5 mm, 2.4 mm, K, and V connectors
01-202	Universal Test Port Connector Wrench
01-203	Torque Wrench (for tightening the VNA test ports to female devices) 20.6 mm (13/16 in), 0.9 N·m (8 lbf·in)
01-204	Anritsu Stainless Steel Connector Wrench, circular, open-ended for SMA, 3.5 mm, 2.4 mm, K and V connectors
01-504	Torque wrench (for tightening male devices) 6 mm, 0.45 N·m (4 lbf·in) for 1.0 mm (W) and 0.8 mm connectors
01-505	6 mm × 7 mm Open End Wrench, Backing wrench for 6 mm torque wrench (above) for 1 mm (W) connectors.
01-524	Low profile Torque Wrench (for tightening male devices), 6 mm, 0.45 N·m (4 lbf·in), 126 mm long for 1.0 mm and 0.8 mm connectors
01-529-R	Torque Wrench, 4 mm (5/32 in), 0.17 N·m (1.5 lbf·in) (for tightening the test and reference IF connectors on the mmWave modules)

Additional Accessories

	DC-220 GHz probes available from MPI Corporation:
2000-1972-R	T220A-GSG050, 220 GHz Probe, 50 μm pitch
2000-1973-R	T220A-GSG075, 220 GHz Probe, 75 μm pitch
2000-1974-R	T220A-GSG100, 220 GHz Probe, 100 μm pitch
