Introduction

This data sheet provides the specified and typical performance of the FieldFox family of portable analyzers. This data sheet should be used in conjunction with the technical overviews and configuration guide, for a complete description of the analyzers.

The specifications for the 32, 44, or 50 GHz analyzers shown in this data sheet apply to the FieldFox analyzers with serial number prefix break ≥ MY/US/SG6125, or with the RF board part number: N9960-63011 [1]. If your FieldFox analyzer (32, 44, or 50 GHz) is with the older RF board (part number of N9960-63001 [1]) and desire to obtain a copy of data sheet that includes specifications reflecting the previous version of hardware, you may contact Keysight technical support by creating a support case via https://support.keysight.com/s/.

The specifications and measurement capabilities listed in this document require certain options on the FieldFox analyzer. Refer to the FieldFox Configuration Guide to obtain option information. The configuration guide is the main resource for option/measurement capability information (https://www.keysight.com/us/en/assets/7018-06515/configuration-guides/5992-3701.pdf).

Definitions

Specification (spec)

Specifications include guard bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions. Specifications are warranted performance. FieldFox must be within its calibration cycle. No warm-up required for the specifications listed on pages 40 through 98.

Typical

Describes additional product performance information not covered by the product warranty. It is performance beyond specifications that 80% of the units exhibit with a 90% confidence level over the temperature range of 23 ± 5 °C, unless otherwise noted. Typical performance does not include measurement uncertainty. FieldFox must be within its calibration cycle.

Nominal

A general, descriptive term or design parameter. It is not tested, and not covered by the product warranty. FieldFox must be within its calibration cycle.

1 To find an analyzer's RF part number, press [System], {Service Diagnostics}, {System Information}. Here, "[ ]" denotes the hard-key, and "{ }" the soft-key.

Cable and Antenna Analyzer (CAT) and Vector Network Analyzer (VNA)

The performance listed in this section applies to the cable and antenna analyzer (referred to as CAT) and vector network analyzer (VNA) capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B, N9950B, N9951B, N9952B, N9953B

NOTE: Combination analyzers = Cable and antenna tester (CAT) + Vector network analyzer (VNA) + Spectrum analyzer (SA)

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

Frequency specifications

	Model	Frequency range

Test port output specifications

High power in the N991xB and N995xB refers to the analyzer's target output power level when the Power Setting is High. Examples:

- N991xB: For a 5 to 10 GHz frequency sweep, the analyzer achieves a 7 dBm power level across the band.
- N995xB: For an 18 to 26.5 GHz frequency sweep, the analyzer achieves a 4 dBm power level across the band.

Low power level for N991xB and N995xB analyzers flattens at -50 dBm across the entire frequency band and is the analyzer's output when the Power Setting is Low.

Max leveled power in the N991xB and N995xB refers to the maximum leveled (flattened) power achieved across the designated frequency range. Examples:

- N991xB: For a 1 to 10 GHz frequency sweep with the analyzer configured to measure all four S-parameters, needing both ports 1 and 2, the maximum power the analyzer can be set to is 5 dBm.
- N995xB: For an 18 to 26.5 GHz frequency sweep with the analyzer configured to measure all four S-parameters, needing both ports 1 and 2, the maximum power the analyzer can be set to is 3 dBm.

1 VNA mode only. Recommend using averaging in CAT mode.

1 For CAT mode, increase trace noise by a factor of 5.7, as CAT mode IFBW is fixed at 10 kHz. Can use averaging in CAT mode to reduce trace noise or use VNA mode with 300 Hz IFBW.
2 Excludes multiples of 65 kHz, and 7.792198 MHz, 8.190585 MHz, and 8.954400 MHz.

CAT and VNA measurements

CAT mode

CAT measurements	Distance-to-fault (dB) Return loss (dB) Return loss & DTF (dB) VSWR Distance-to-fault (VSWR) Cable loss (1-port) Insertion loss (2-port) (requires option 211) Distance-to-fault (Lin) TDR (Lin rho) (requires option 215) TDR (ohm) (requires option 215) TDR & DTF (requires option 215)
Distance-to-Fault (DTF) settings	
Frequency/distance	Start distance, stop distance
Sweep time	Units: meters or feet (Can also be set as Preferences)
Frequency mode	Bandpass, lowpass
CAT mode averaging	Set sweep time in seconds
Distance-to-Fault	Available in CAT mode. Standard on N991xB analyzers. Range = velocity factor x speed of light x (number of points -1) / frequency span x 2; number of points auto coupled according to start and stop distance entered. Resolution = range / (number of points -1) Transform modes: Bandpass, low-pass Window types: Maximum, medium, and minimum Alias free range indicator: On/Off Dispersion compensation for waveguide: Yes
Return loss, log magnitude	-500 to 500 dB
Log magnitude resolution	0.01 dB
VSWR	1.01 to 1000
VSWR resolution	0.01

VNA mode	
VNA Transmission/Reflection (T/R)	S11, S21 magnitude and phase (requires Option 210)
VNA S-parameters	S11, S21, S22, S12 magnitude and phase (requires Options 210 and 211)
Number of traces	Four traces available: Tr1, Tr2, Tr3, Tr4
Display formats	Single-trace Dual-trace split (each trace on separate graticule) Dual-trace overlay (both traces on one graticule) Three-trace split (each trace on separate graticule) Three-trace overlay (all three traces on one graticule) Quad-trace split (each trace on separate graticule) Quad-trace overlay (all four traces on one graticule)
VNA trace formats	Log magnitude, linear magnitude, VSWR, phase, Smith chart, polar, group delay, unwrapped phase, real impedance, imaginary impedance, Z magnitude
Frequency settings	Start, stop, center, span
Frequency sweep type	Linear
Sweep type trigger	Continuous, single
Sweep trigger source	Internal, external, point (point trigger applies to 1-port cal only)
Sweep trigger slope	Positive, negative
Sweep trigger delay	0 to 10 seconds
Averaging	Sweep: 2 to 1000; Point: 2 to 500
Smoothing	Computes the moving average of adjacent data points. Smoothing aperture defines the trace width (number of points) to be averaged. Minimum aperture: 0.05% of frequency span Maximum aperture: 25% of frequency span
Scale	Autoscale, scale, reference level, reference position Autoscale: Automatically selects scale resolution and reference value to center the trace. Autoscale all: Scales all visible traces.
S11, log magnitude	-500 to 500 dB
Log magnitude resolution	0.01 dB
VSWR	1.01 to 1000
VSWR resolution	0.01
Phase	-180 to +180 degrees (unwrapped phase can show larger values)
Phase resolution	0.01 degrees
Phase offset	-360 to +360 degrees
Magnitude offset	-100 to +100 dB
Trace math	Vector division or subtraction of current linear measurement values and memory data
Port extension	For both port 1 and port 2, delay settings. Port extensions apply to all measurements.
Marker formats	Default marker format is the trace format. Other formats: R + jX Z magnitude Phase Real Imaginary Mag & Phase dB Angle

General CAT / VNA modes	
Marker functions	Peak, Next Peak, Peak Left, Peak Right, Mkr→Center, Mkr→Delay, Min Search, Peak Excursion, Peak Threshold, Target, Bandwidth (BW, Q, Loss), Tracking CAT mode only: Tracking 3 peaks (CAT mode), Mkr→Start distance, Mkr→Stop distance
Marker table	On/Off
Marker types	Normal, delta, data trace and memory trace markers
Marker coupling	On/Off (coupling between traces)
Frequency blanking	Security level: none, high. If high, all frequency information is blanked out. An instrument preset is required to re-enable the frequency information.
Display data	Display data, memory, data and memory, or data math
Trace math	One memory trace per data trace.

CAT and VNA mode calibrations

FieldFox analyzers offer three tiers of calibrations, thus providing users with different levels of calibration effort and accuracy.

CalReady

CalReady is the most basic calibration and is sufficient for a quick pass/fail or go/no go verification. Every FieldFox is calibrated at the factory, at test ports 1 and 2, at room temperature. CalReady can be applied either as an “enhanced response CalReady” or a “2-port CalReady.” The default setting is 2-port CalReady, so correction is applied to both ports. A user preference allows user to change the CalReady methodology to enhanced response CalReady.

A 30-minute warm-up period is recommended for a quick test. A 60-minute warm-up is necessary for more stringent test requirements.

If CalReady is the basis for most measurements, the annual cal cycle must be followed, as the CalReady calibration will be updated during the annual cal cycle.

Standard calibrations

Standard calibrations are the most accurate calibrations offered in FieldFox. FieldFox's calibration engine is based on Keysight's flagship PNA calibration engine, and as such, offers many of the standard calibrations. FieldFox supports both coaxial and waveguide calibrations. The table below lists the commonly used calibrations.

Keysight recommends a 30-minute warm-up period for standard calibrations. For ultimate in stability and accuracy, a 90-minute warm-up period is necessary.

Frequency response

Open response Short response Thru response With and without isolation	Simultaneous magnitude and phase correction of frequency response errors for either reflection or transmission measurements. Isolation corrects for crosstalk errors.
1-port OSL (Port 1)	Open, short, and load
1-port OSL (Port 2)	Traditional 1-port calibration for reflection measurements. Corrects for directivity, source match, and frequency response errors.
SSL (for waveguide)	For waveguide calibrations, depending on the calibration kit definition, this is presented as a short, offset short and load calibration.
Enhanced response (also known as one-path, two-port) Forward enhanced response Reverse enhanced response	Corrects for frequency response and source match. Partial correction for load match for low-loss reciprocal devices.
QSOLT (2-port)	QSOLT or Quick short-open-load-thru is FieldFox's default recommended calibration for insertable devices. Full 12-term error correction. Requires fewer connections, compared to traditional SOLT (4 compared to 7). Corrects for directivity, source match, reflection frequency response, load match, and transmission frequency response.
Full 2-port (unknown thru calibration)	FieldFox's default recommended calibration for non-insertable devices. Full 12-term error correction. Beneficial for characterizing non-insertable devices such as Type-N to 3.5 mm, or female-female devices. Corrects for directivity, source match, reflection frequency response, load match, and transmission frequency response.
TRL	TRL or thru-reflect-line compensates for directivity, reflection, and transmission frequency response in both the forward and reverse directions.

Note: FieldFox does not offer the traditional SOLT calibration. Instead, it offers the more accurate Full 2-port (unknown thru), and also QSOLT.

ECal

FieldFox supports all Keysight USB ECal modules, both standard and value-line ECals.

FieldFox's guided calibration wizard

FieldFox's calibration wizard recommends a calibration type and calibration kit based on selected parameters and connector types. Alternatively, users can select their own calibration type and calibration kit. FieldFox's calibration wizard ensures a valid calibration selection.

Interpolation error correction

With any type of accuracy enhancement applied, interpolated mode recalculates the error coefficients when the test frequencies are changed. The number of points can be increased or decreased, and the start/stop frequencies can be changed, but the resulting frequency span must be a subset of the original calibration frequency span.

Connectors

The FieldFox firmware supports the following connector types by default. Add other connector types with a calibration kit that contains the connector type.

Coaxial	Waveguide	
Type-N 50 ohm	WR-10	WR-90
Type-N 75 ohm	WR-15	WR-112
7/16	WR-22	WR-137

TDR Cable Measurements (Option 215)

The performance listed in TDR cable measurements, VNA time domain, mixed-mode S-parameters and vector voltmeter sections apply to the capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B, N9950B, N9951B, N9952B, N9953B

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

The TDR cable option adds time domain reflectometry (TDR) measurements to FieldFox's CAT mode. FieldFox's TDR measurements are based on an inverse Fourier transform of the frequency-domain data. TDR measurements are useful in not only identifying the location of faults along cables, but also the nature of the fault. Resistive, inductive and capacitive faults will each have a different response. These differences help engineers and technicians' trouble-shoot line faults.

Measurements: TDR (linear rho), TDR (ohm), TDR & DTF

Y-axis: linear (rho) or impedance (ohm)

X-axis: distance (meters or feet)

VNA Time Domain (Option 010)

In time-domain mode, FieldFox computes the inverse Fourier transform of the frequency-domain data to display reflection or transmission coefficients versus time.

Setup parameters

Time	Start, stop, center, span
Gating	Start, stop, center, span, and on/off
Numbers of points, velocity vector, line loss, window shape, independent control for all four traces	

Time stimulus modes

Low-pass step	Low-pass step is similar to a traditional time domain reflectometer (TDR) stimulus waveform. It is used to measure low-pass devices. The frequency-domain data should extend from DC (extrapolated value) to a higher value.
Low-pass impulse	Low-pass impulse response is used to measure low-pass devices.
Bandpass impulse	The bandpass impulse simulates a pulsed RF signal and is used to measure the time domain response of band-limited devices.

Windows

The windowing function can be used to filter the frequency domain data and thereby reduce overshoot and ringing in the time domain response.	
Windows	Minimum, medium and maximum, manual entry of Kaiser Beta and impulse width.

Gating

The gating function can be used to selectively remove reflection or transmission time domain responses. In converting back to the frequency domain, the effects of the responses outside the gate are removed. The results can be viewed with gating on and off, using two traces.	
Gate types	Notch, bandpass
Gate shapes	Maximum, wide, normal, minimum

Mixed-Mode S-Parameters (Option 212)

Mixed-mode S-parameters are also known as balanced measurements.

Measurements

Scc11	Common mode reflection
Sdd11	Differential mode reflection
Scd11	Differential mode stimulus, common mode response
Sdc11	Common mode stimulus, differential mode response

FieldFox's mixed-mode S-parameter measurements require the use of the default factory calibration or a user 2-port calibration. So, the FieldFox analyzer must be equipped with 2-port measurement functionality to measure mixed-mode S-parameters. Mixed-mode S-parameters are an extension of the VNA capabilities.

Vector Voltmeter (VVM) (Option 308)

With vector voltmeter mode, you can characterize the difference between two measurements easily. The zeroing function allows you to create a reference signal and characterize the difference between two device measurements. The results are shown on a large display in digital format.

1-port cable trimming	Reflection (S11 or S22 measurement), magnitude and phase
2-port transmission	Transmission or S21 measurement, magnitude, and phase
A/B and B/A	Ratio of two receivers or channels, magnitude, and phase – Need an external signal generator for the A/B or B/A measurement
	Frequency (one CW frequency point)
	IF bandwidth: 10 Hz to 100 kHz or 3 Hz to 30 kHz
	Output power: Low, high, manual

Ratio accuracy (A/B and B/A)

Must zero before measuring DUT. Recommend using a high-quality power splitter or 6 dB attenuators to minimize uncertainty due to mismatch.

Frequency reference, -10 to 55 °C

Accuracy	±0.9 ppm (spec) + aging
	±0.5 ppm (typical) + aging
Accuracy, when locked to GPS	±0.01 ppm (spec) [2]
Accuracy, when GPS antenna is disconnected	±0.4 ppm (nominal) [3]
Aging rate	±1 ppm/yr for 20 years (spec), will not exceed ±3.5 ppm
Frequency readout accuracy (start, stop, center, marker)	
± (readout frequency x frequency reference accuracy + RBW centering + 0.5 x horizontal resolution)	Horizontal resolution = frequency span/(trace points – 1) • 5% x RBW, FFT mode (nominal) • 16% x RBW, step mode (nominal)

1 The spectrum analyzer is tunable to 0 Hz or DC.

2 This is a pass-through specification provided by the GPS vendor and is not verified by Keysight.

3 The maximum drift expected in the frequency reference applicable when the ambient temperature changes ±5 °C from the temperature when the GPS signal was last connected.

Tracking Generator or Independent Source

The performance listed in this section applies to the tracking generator and independent source capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers:	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B
FieldFox RF & microwave signal analyzers:	N9933B, N9934B, N9935B, N9936B, N9937B, N9938B
FieldFox microwave (combination) analyzers:	N9950B, N9951B, N9952B, N9953B
FieldFox microwave signal analyzers:	N9960B, N9961B, N9962B, N9963B

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

Note: Traditional tracking generators track the receiver frequency only. In FieldFox analyzers, the tracking generator frequency can be set to either track the receiver frequency, or act as an independent CW source.

Traces	
Number of windows & layout	1, 2 (top & bottom), 3 (one top, two bottom), or 4 (quad display)
Number of traces	4, all four traces can be active simultaneously in all windows
States	Clear/write, max hold, min hold, average, view, blank
Markers	
Number of markers	6 normal + delta pairs
Type	Normal, delta, peak, marker table (up to 6 markers)
Couple markers	On/off (couple markers between traces in different windows)
Mkr →	Peak, next peak, center frequency, reference level
Trigger	
Trigger type	Free run, external, video, RF burst, periodic
Trigger slope	Positive edge, negative edge
Trigger delay	Range: -150 ms to 500 ms
	Resolution: 100 ns
Auto trigger	Forces a periodic acquisition in the absence of a trigger event
	Range: 0 (off) to 30 s
Data storage	
Data types	Trace, Trace+state, picture (PNG)
I/Q capture data file types	CSV, text (TXT), SDF (compatible with 89600 VSA software), Matlab (MAT)
I/Q data formats via SCPI	Raw binary interleaved I/Q data recording, REAL32 (ASCII is default)

Noise Figure (NF) (Option 356)

The specifications in this section apply to the noise figure measurement capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers:	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B
FieldFox RF & microwave signal analyzers:	N9933B, N9934B, N9935B, N9936B, N9937B, N9938B
FieldFox microwave (combination) analyzers:	N9950B, N9951B, N9952B, N9953B
FieldFox microwave signal analyzers:	N9960B, N9961B, N9962B, N9963B

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

No warm-up is required for the instrument specifications.

Noise figure	Noise figure (F dB)		
Noise factor	Noise figure as a ratio (F)		
Gain	Gain (G dB)		
Noise temperature	Noise temperature in Kelvin (K)		
Y-factor	Y-factor (Y dB)		
Setup parameters			Supplemental information
Noise source			Load ENR value(s)
DUT type	Amplifier, downconverter, upconverter, multi-stage converter		Built-in GUI wizard aids DUT measurement setup
Integration	Mode	Auto	Auto Integration: optimizes gain to avoid compression, and measurement time to achieve jitter goal
		Fixed	Fixed Integration: the time per point over which the measurement is averaged is fixed
	Jitter goal		Sets measurement jitter performance target
	Max time / point		Allows user to trade-off jitter vs. measurement time
	Jitter warning		On: displays circles on trace data if jitter goal is exceeded
Loss compensation	Before DUT, After DUT		User definable, compensates measurement for loss (dB) before and after DUT
Measurement bandwidth (nominal)			
Range	5 MHz (default), 3 MHz, 1 MHz, 300 kHz		
Frequency reference	Refer to spectrum analyzer specifications		

Noise figure uncertainty calculator [1]			Supplemental information
			Built-in Based on data from measurement
DUT	Mode	Spot	Applies single values uniformly across frequency: Input |Γ| and Output |Γ| Γ specification style: Maximum, 95th percentile, 80th percentile, Median, Mean, Fixed Γ distribution: Rayleigh, Fixed, Uniform in Circle
		Table	Applies a table of values vs. frequency: Input |Γ| and Output |Γ|
Preamplifier	Mode	Spot	Applies single values uniformly across frequency Input |Γ| and Output |Γ| Γ specification style: Maximum, 95th percentile, 80th percentile, Median, Mean, Fixed
		Table	Applies a table of values vs. frequency: Input |Γ| and Output |Γ| Γ specification style: Maximum, 95th percentile, 80th percentile, Median, Mean, Fixed
Noise source	ENR Mode	Spot	Applies single values uniformly across frequency: ENR (dB), ENR Uncertainty (dB), On |Γ|, Off |Γ|, ENR Uncertainty Confidence (SD)
		Table	Applies a table of values vs. frequency: ENR (dB), ENR Uncertainty (dB), On |Γ|, Off |Γ|, ENR Uncertainty Confidence (SD)
		Smart (auto) [2]	For U183x USB smart noise sources (SNS) only. When connected with a USB SNS, FieldFox automatically downloads the ENR table data from the SNS and applies a table of values vs. frequency: ENR (dB), ENR Uncertainty (dB), On |Γ|, Off |Γ|, ENR Uncertainty Confidence (SD)
Uncertainty contributions	Jitter		Random independent events (fluctuations) within the bandwidth occurring during the noise measurement
	ENR		Excess noise ratio of the hot noise source connected to the DUT during the measurement
	Mismatch		Errors resulting from reflections due to impedance differences between components
	User calibration		Errors due to the optional user calibration which is performed with a defined noise standard (ENR source) connected to the input of an LNA, and fixturing/cables used in the DUT measurement, and port 2 of the FieldFox
Uncertainty coverage			User settable, uncertainty coverage can be set to 1σ (80%), 2σ (95% default), 3σ (99.5%)
Uncertainty bars			Displays vertical bars representing the calculated measurement uncertainty overlaid on the trace data
Loss compensation	Before DUT		User definable, single value, compensates measurement for insertion loss (dB) before DUT
	After DUT		User definable, single value, compensates measurement for loss (dB) after DUT
Instrument match	VSWR values are preloaded and automatically applied for instrument and U7227A/C/F or U7228A/C/F preamplifiers		
Calibration options			
Receiver calibration	Uses noise source to calibrate FieldFox receiver gain bandwidth		
User calibration with external U7227A/C/F or U7228A/C/F preamplifier	Optional calibration performs hot/cold measurement with external preamplifier; applies receiver and user calibrations

1 Performance specified above 1 MHz. Usable down to 5 kHz.
2 Requires external mixer to down convert millimeter wave frequency to intermediate frequency (IF)
3 For center frequency signals above 1 GHz, the built-in GPS receiver (Option 307) is highly recommended or locking to any 10 MHz frequency reference. When locked to GPS as the frequency reference, this provides accuracy of ± 0.01 ppm (spec).

Over-the-Air (OTA) 5G NR (Option 378)

The performance listed in this section applies to the OTA analyzer capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers:	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B

Window configuration	Any combination of 1, 2, 3, or all 4 windows can be displayed simultaneously: 1, 2 (top & bottom), 3 (one top, two bottom), or 4 (quad display)	

1 You can also display the results from multiple component carriers on the table, bar chart, and strip chart displays.

Setup parameters

5G NR Over-the-Air (OTA)	
Frequency error threshold	0 Hz to 7.5 kHz [1]
Subcarrier spacing	15 kHz, 30 kHz, 120 kHz, 240 kHz
SSB case	Auto, A, B, C, D, E
Lmax	Auto, 4, 8, 64
Capture length	4, 8, 16, 24, 32 or 40 frames
Drive speed	Low, medium, high
SS Meas DMRS	Off, On
Phase compensation	Off, On
EMF Measurement	Off, On
EMF Units	dBµV/m, V/m
5G NR Conducted EVM

Bandwidth	FR1: 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100 MHz
	FR2: 50, 100 MHz
Subcarrier spacing	15 kHz, 30 kHz, 120 kHz, 240 kHz
Export results	Exports SSB center frequency, SSB subcarrier spacing, SSB Case and SSB Lmax to 5G NR OTA setup
Trigger	
Trigger type	Free run, external, periodic trigger
Record/Playback	
Data logging	Record, recall and playback data for all component carrier(s)
Record settings	Meas Interval, Interval type (time or distance), time interval, distance interval
Supported file types	CSV, KML
Saving data	Save/recall recorded data logs to/from internal memory or external USB or SD card

1 The frequency error threshold is dependent on the SCS - freq err threshold = +/- 1/4 * SCS (e.g. for 15 kHz, freq err threshold = 3.75 kHz).

Indoor and Outdoor Mapping (Option 352)

The performance listed in this section applies to the indoor and outdoor mapping capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers:	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B
FieldFox RF & microwave signal analyzers:	N9933B, N9934B, N9935B, N9936B, N9937B, N9938B
FieldFox microwave (combination) analyzers:	N9950B, N9951B, N9952B, N9953B
FieldFox microwave signal analyzers:	N9960B, N9961B, N9962B, N9963B

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

Option 352 adds indoor and outdoor mapping capability to FieldFox analyzers, so that FieldFox can import maps from OpenStreetMap (OSM) for data collection and data plotting to the map directly on the FieldFox instrument display. The FieldFox indoor and outdoor mapping feature resides at the System level and the mapping capability can be enabled within the following modes:

- Channel Scanner (Option 312)
- Phased Array Antenna Support (Option 360)
- Over-the-Air (OTA) LTE FDD/TDD (Option 370/371)
- Over-the-Air (OTA) 5GTF (Option 377)
- Over-the-Air (OTA) 5G NR (Option 378)
- Indoor and outdoor mapping (Option 352) requirements:
- Spectrum analyzer mode (Option 233 on N991xB/N995xB, default mode on N993xB/N996xB)
- GPS receiver (Option 307), required for outdoor mapping
- OSM maps can be saved to the FieldFox internal memory, SD card or USB drive. This can be done via a direct wired LAN connection or OSM maps can be downloaded and saved to FieldFox using the FieldFox Map Support Tool.

	Description
Map coordinates	Latitude, longitude
Map zoom levels	4 to 17
Map icons	Flag, point, line
Map labels	On, Off
Map panorama	North, South, East, West
Data logging	Record, recall and playback
Indoor map file type	PNG

Using a direct wired LAN connection, FieldFox will automatically access OSM once location coordinates (latitude and longitude) and zoom levels are entered the Map Explorer menu. If using the FieldFox Map Support Tool, OSM map files can be downloaded to a .zip file and imported to FieldFox internal memory.

If the FieldFox GPS receiver is enabled and OSM maps have been previously saved to FieldFox with those GPS coordinates, FieldFox can automatically load the corresponding map to match the GPS coordinates.

Measurement uncertainty[1,2]

Frequency range	Amplitude uncertainty (-10º to +55ºC)
9 kHz – 100 kHz[3]	± 2.86 dB
100 kHz – 30 MHz[3]	± 2.71 dB
30 MHz – 500 MHz[4]	± 2.71 dB
500 MHz – 6 GHz[4]	± 2.73 dB

[1] Uncertainty values are stated for conditions where FieldFox pre-amp is either enabled or disabled.

[2] Total uncertainty includes FieldFox, antenna, 1m RF cable and associated connectors.

[3] Schwarzbeck FSH3D antenna utilized 9 kHz to 30 MHz.

[4] Keysight 85572A antenna utilized 30 MHz to 6 GHz.

AM/FM Analog demodulation, Tune and Listen (Option 355)

The performance listed in this section applies to the AM/FM analog demodulation, tune and listen capabilities available in the following models:

Description	Model number
FieldFox RF & microwave (combination) analyzers:	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B
FieldFox RF & microwave signal analyzers:	N9933B, N9934B, N9935B, N9936B, N9937B, N9938B
FieldFox microwave (combination) analyzers:	N9950B, N9951B, N9952B, N9953B
FieldFox microwave signal analyzers:	N9960B, N9961B, N9962B, N9963B

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

	Description
Display type	RF spectrum view, demodulated waveform, including peak+ and peak- traces
Audio demodulation type	AM, FM narrow, FM wide, SSB and CW (Morse code), listen to the tones using FieldFox's built-in speaker or headphones
Audio bandwidth	16 kHz
Measurement type	RF carrier power (dBm), RF carrier frequency (Hz), modulation rate (Hz), SINAD (dB), THD (%)
AM & FM metrics	Nominal
SINAD	2.5 dB to 65 dB
THD	0 to 75%
AM measurements	Nominal
Maximum modulation rate	5 kHz, demod sweep time: 50 µs to 50 ms
Depth	(peak-to-peak/2) (%), ± peak depth (%)
Depth accuracy	±2%
Depth range	Modulation: 0.1% to 99%
FM measurements	Nominal
Maximum modulation rate	5 kHz, demod sweep time: 50 µs to 50 ms
Frequency deviation	(Hz), ± peak deviation (Hz)
Maximum deviation	5 MHz (nominal)
Audio record/playback	
Record audio into WAV file with time stamp and geo tag and playback on PC	

Radio standards

With a radio standard applied, pre-defined frequency bands, channel numbers or uplink / downlink selections can be used instead of manual frequency entry. The pre-defined FieldFox radio standards include bands such as W-CDMA, LTE, and GSM. Alternately, users can create custom standards and import them into FieldFox analyzers.

Spectrum Analyzer Time Gating (Option 238)

With time gating, you can measure the spectrum of a periodic signal during a specified time interval. Pulsed-RF signals are an example of a periodic signal that can be measured with time gating. For example, you can measure the pulse during the on period, not the transition or the off period. Or you can exclude interfering signals such as a periodic transient. Time gating allows you to view spectral components that would otherwise be hidden. FieldFox's time gating method is a Gated FFT.

	Description
Gate method	Gated FFT
Span range	Any span
RBW range	1 Hz to 300 kHz (derived from gate width)
Gate delay range	-150 ms to 10 s
Gate width (length) range	6 µs to 1.8 s
Gate sources	External, RF burst, Video

Reflection Measurements (RL, VSWR) (Option 320, applicable to SA only models)

The performance listed in this section applies to the reflection measurements capabilities available in the following models:

Description	Model number
FieldFox RF & microwave spectrum analyzers:	N9933B, N9934B, N9935B, N9936B, N9937B, N9938B
FieldFox microwave signal analyzers	N9960B, N9961B, N9962B, N9963B

See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

	Models	Reflection measurements
N993xB	N9933B	30 kHz to 9 GHz
	N9934B	30 kHz to 9 GHz
	N9935B	30 kHz to 9 GHz
	N9936B	30 kHz to 14 GHz
	N9937B	30 kHz to 18 GHz
	N9938B [1]	30 kHz to 26.5 GHz
N996xB	N9960B	300 kHz to 32 GHz
	N9961B	300 kHz to 44 GHz
	N9962B	300 kHz to 50 GHz
	N9963B	300 kHz to 54 GHz
Measurements		
Return loss, VSWR normalization using data/memory (requires Option 220 tracking generator)		

1 Reflection measurements in N9938B specifically require 3.5 mm (m) test ports (Option 100) instead of the standard Type-N (f)

Extended Range Transmission Analysis (ERTA) (Option 209)

ERTA specifications apply to the following FieldFox models. The RF & microwave analyzers must be equipped with the spectrum analyzer option.

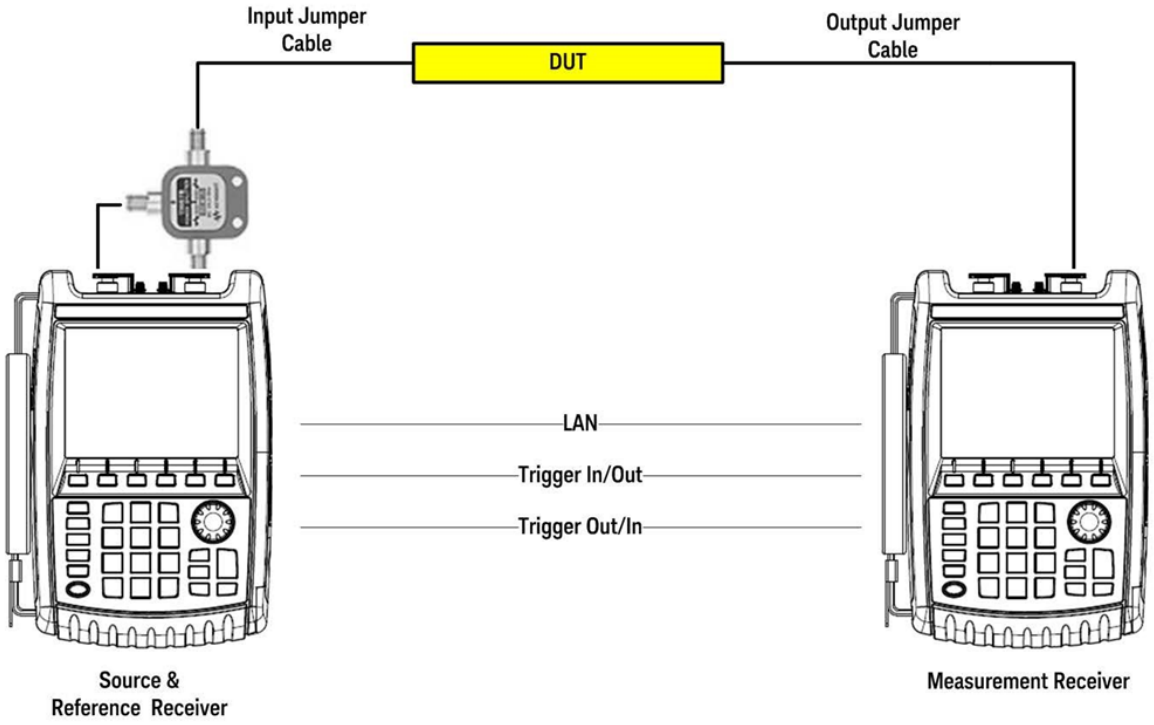
Description	Model number
FieldFox RF & microwave (combination) analyzers:	N9913B, N9914B, N9915B, N9916B, N9917B, N9918B
FieldFox RF & microwave signal analyzers:	N9933B, N9934B, N9935B, N9936B, N9937B, N9938B
FieldFox microwave (combination) analyzers:	N9950B, N9951B, N9952B, N9953B
FieldFox microwave signal analyzers:	N9960B, N9961B, N9962B, N9963B

ERTA operation requires two FieldFox units, each one configured with specific options, and certain accessories. See FieldFox Configuration Guide for option information. Many capabilities listed in this Data Sheet require options.

System description

ERTA can be used to measure the scalar transmission gain or loss of an RF system. It is useful when measuring long lossy cables where the two ends cannot easily be brought together, such as those bolted in on ships or aircrafts. It is also useful in measuring the insertion loss of waveguide systems, or using the frequency-offset feature, devices such as mixers and converters.

ERTA measurements are based on two FieldFox units; one at each end of the measured DUT. One FieldFox is the source and reference receiver (R), while the other is the measurement receiver (B). The two FieldFox units are synchronized using hardware triggering. By taking advantage of FieldFox's InstAlign technique, ERTA can be used to make accurate gain or loss measurements.



Frequency specifications

The ERTA frequency range is limited by each individual analyzer's frequency range.

	Models	Source frequency range	Receiver frequency range [1]
N991xB, N993xB	N9913B, N9933B	30 kHz to 4 GHz	9 kHz to 4 GHz
	N9914B, N9934B	30 kHz to 6.5 GHz	9 kHz to 6.5 GHz
	N9915B, N9935B	30 kHz to 9 GHz	9 kHz to 9 GHz
	N9916B, N9936B	30 kHz to 14 GHz	9 kHz to 14 GHz
	N9917B, N9937B	30 kHz to 18 GHz	9 kHz to 18 GHz
	N9918B, N9938B	30 kHz to 26.5 GHz	9 kHz to 26.5 GHz
N995xB, N996xB	N9950B, N9960B	300 kHz to 32 GHz	9 kHz to 32 GHz
	N9951B, N9961B	300 kHz to 44 GHz	9 kHz to 44 GHz
	N9952B, N9962B	300 kHz to 50 GHz	9 kHz to 50 GHz
	N9953B, N9963B	300 kHz to 54 GHz	9 kHz to 54 GHz
Frequency reference			
Refer to the frequency accuracy specifications			
Source output power			
Refer to the test port output power typical data			

1 The receiver (spectrum analyzer) is usable to 5 kHz, though only specified to 9 kHz.

Frequency setup parameters

Receiver frequency	Center/span or start/stop (standard spectrum analyzer settings). Reverse receiver sweep direction (default direction is forward, but can be set to reverse).
Source frequency [Remote]	[Tracking] – FieldFox source tracks the receiver by default. The frequencies are identical. [CW] – FieldFox's source can be set to a CW frequency independent of FieldFox's receiver frequency. FieldFox's source is at a single CW frequency; FieldFox's receiver is swept. [Coupled CW] – FieldFox's source CW frequency is auto-coupled to FieldFox's receiver [Center Frequency] setting.
Frequency-offset capability	
This feature allows the FieldFox's source frequency to be offset from FieldFox's receiver frequency. The offset frequency can be negative, zero, or positive. The frequency-offset capability is useful when characterizing the scalar transmission response of devices such as mixers and converters.	
Frequency-offset setup parameters	
Receiver frequency	Center/span or start/stop (standard spectrum analyzer settings) Reverse receiver sweep direction (default direction is forward, but can be set to reverse)
Frequency tracking offset	On/Off Offset values: 0, > 0, < 0
Receiver sweep direction	Reversal: Off Default setting Both source and receiver sweep in the forward direction. Receiver stop frequency > Receiver start frequency Source frequency = Offset + Receiver frequency Reversal: On Source and receiver sweep in opposite directions. Source frequency = Offset − Receiver frequency Offset > receiver frequency

Dynamic range and maximum attenuation

Dynamic range is the difference between the maximum output power available from FieldFox's source and the noise floor of the second FieldFox, while ensuring that neither FieldFox's ADC goes into over-range. Dynamic range also accounts for the loss of the power splitter. Dynamic range is applicable when testing devices such as filters, where there is low loss in the passband, and significant loss in the stopband, and both passband and stopband need to be on the display at the same time (same sweep).

Maximum attenuation is the difference between maximum output power available from FieldFox's source and the noise floor of FieldFox. It also accounts for the loss of power splitter. Maximum attenuation is applicable when testing devices such as cables, which have relatively uniform loss over the swept frequency range.

The values shown are based on the recommended minimum RBW of 3 kHz when the frequency references are locked via GPS, and 300 kHz when the frequency references are unlocked. Locking the frequency references to GPS allows for greater frequency accuracy of the FieldFox units and use of a narrower RBW, which in turn results in a lower DANL, and hence a wider measurement range. When the GPS signals cannot be present at all times, the GPS hold-over mode can be used.

External USB Power Sensor Support (Option 302)

The external USB power sensor option supports various Keysight USB power sensors. For an up-to-date listing of the supported power sensors, visit http://www.keysight.com/find/fieldfoxsupport

	Description
Setup parameters	Frequency
Functions	Relative/absolute measurements, offsets, units of dBm or Watts, or dB or %, minimum and maximum limits.
Internal source	FieldFox's internal source can be turned on in the USB power sensor mode. CW frequency and nominal power level control are available.

Pulse Measurements (Option 330)

FieldFox's pulse measurement option can be used to characterize RF pulses such as those used in radar and electronic warfare systems. Measurements are made using FieldFox and Keysight's USB peak power sensors.

Performance specifications such as frequency, dynamic range and minimum pulse width depend on the peak power sensor. Supported peak power sensors: http://www.keysight.com/find/fieldfoxsupport

	Description
Setup parameters	Frequency, time (center), time/division, gating, triggering, video bandwidth, averaging
Functions	Average power, peak power, and peak to average ratio
	Analog gauge display and digital display, dBm and Watts
	Relative/absolute measurements, offset, dB or %, minimum and maximum limits
	Trace graph for pulse profiling with gating
	Rise time, fall time, pulse width, pulse period, pulse repetition frequency

USB Power Sensor Measurements versus Frequency (Option 208)

This feature allows FieldFox's source frequency to be set independently from the power sensor (receiver) frequency. With frequency-offset using power sensor (FOPS), the frequency of both the source and receiver are swept, and the two track each other. The offset frequency can be negative, zero, or positive.

FOPS can be used to characterize the scalar transmission response of devices such as mixers and converters. This frequency-offset capability is necessary for conversion loss/gain measurements on frequency-translating devices, since, by definition, the input and output frequencies of the DUT are different. The FieldFox source stimulates the DUT and the power sensor is used as the measurement receiver.

Since power sensors are inherently broadband devices (not frequency-selective), the user should ensure that only the signal of interest is present at the power sensor input and that all other signals are filtered appropriately.

Setup parameters

Source frequency	Center/span or start/stop
Receiver frequency	Range determined by power sensor range
Frequency offset	Positive offset or negative offset
Frequency step size	30 kHz minimum
Number of points	2 to 1601 (Combination of number of points and frequency step size limited by span.)
Dwell time/point	0 to 1.0 sec

Source frequency span must be equal to receiver frequency span.

Receiver sweep direction: forward (default setting) or reverse.

For some DUTs, the output frequency may sweep in a reverse direction, as compared to the source frequency. The basic relationships between the source, receiver and offset frequencies are shown in the table below. The FieldFox analyzer includes an offset calculator that ensures a fast measurement setup.

Src sweep direction	Rx sweep direction	Frequency calculations
Forward $f2_{src} > f1_{src}$	Forward $f2_{rx} > f1_{rx}$	Receiver frequency = Source frequency ± Offset
Forward $f2_{src} > f1_{src}$	Reverse $f2_{rx} > f1_{rx}$	Receiver frequency = Offset - Source Frequency Offset > Source frequency

	Description
Measurements	Source power, gain/loss and receiver (Rx) power
	Gain = Rx power / source power (memory). Source power (memory) is measured during setup.
Output power	Refer to the test port output power typical data on page 5.
Dynamic range	The dynamic range with FOPS is dependent on FieldFox's output power and the power sensor's dynamic range. Supported USB power sensors: www.keysight.com/find/fieldfoxsupport

The graph below shows a filter measurement using two different power sensors, the U2002A (- 60 to +20 dBm) and the U2021XA (- 45 to +20 dBm). While a filter is not commonly measured using FOPS, it is a useful device for demonstrating dynamic range.

For both measurements, the FieldFox source power was set to - 1 dBm, the maximum available in the selected frequency range of 7.25 to 13.25 GHz. An external amplifier was not used in this case, but one can be added to increase the source power and hence dynamic range.

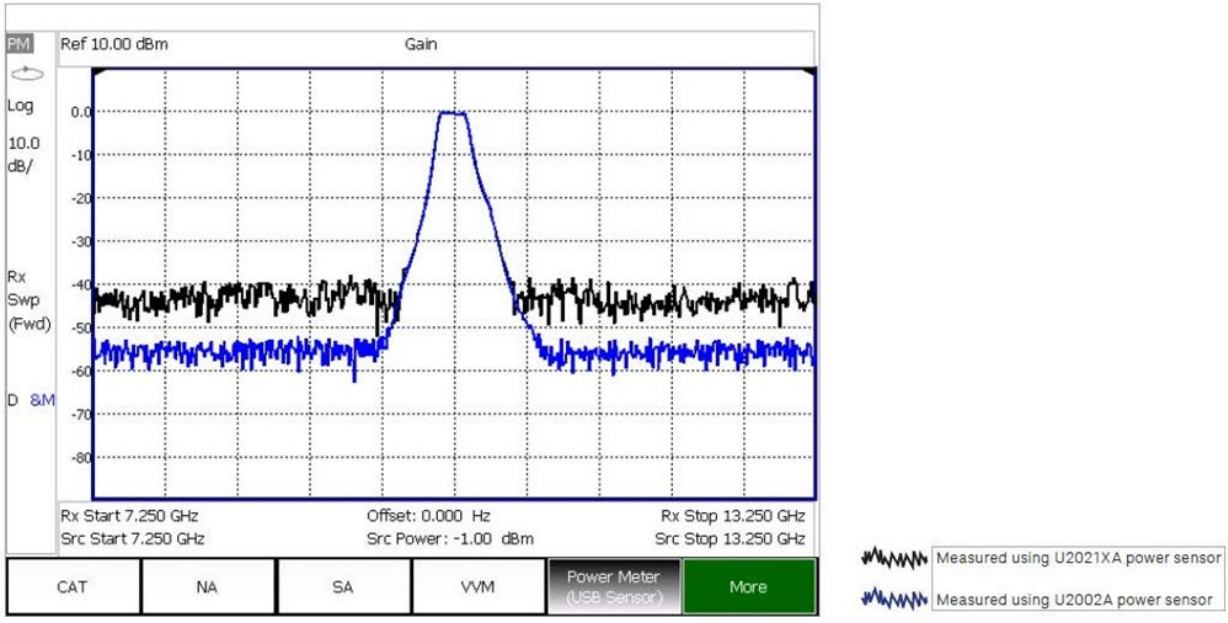

Figure 1. Example showing typical dynamic range of FOPS

Built-In GNSS (GPS+) Receiver (Option 307)

	Description
GNSS (GPS+) receiver	The internal GNSS/GPS receiver can be used as a frequency reference. [1]
Supported systems	GPS, GLONASS, BeiDou and Galileo
Modes	Off, internal, external
Sync clock	On, off
Functionality	Geo-location: latitude, longitude, altitude (elevation), time, sync time/date
	Requires external GNSS/GPS antenna (can use N9910X-825, GPS active antenna)
Connector for antenna	SMA (f), 3.3 or 5 V
Maximum DC current	20 mA

DC Bias Variable-Voltage Source (Option 309)

	Description
Connector	SMB (m)
Voltage	+1 to +32 V (nominal)
Resolution	0.1 V (nominal)
Maximum current	0.65 A (nominal)
DC current readout resolution	0.01 (nominal)A
Maximum power [2]	7 watts (nominal)
Display read out	Voltage, current
Overload trip protection	Automatically engages when voltage source is on. The trip circuit can be reset from front panel without pre-setting or power cycling the analyzer.

1 External GPS USB receivers can be used to provide geo-location data. However, they cannot be used for frequency reference locking.
2 Battery life will be reduced when DC source is used. A trip function turns off the power supply when the rated current or power is exceeded.

Remote Control Capability (Option 030)

Option 030 adds remote control capability to FieldFox analyzers, so that FieldFox can be controlled via an iOS device, or an Android device. The FieldFox app, running on the iOS/Android device, combined with Option 030 on the FieldFox analyzer provides full control of the instrument from a remote location. The app emulates the front panel of FieldFox, so users can press the FieldFox hard keys or softkeys using their iPhone/iPad, or Android mobile device and make measurements remotely. For example, a tower climber can be on the tower with a FieldFox analyzer, while the technician controls and makes the measurements down below, using an iPad. The iPad and FieldFox communicate via a network connection.

iOS device requirements	Android device requirements
iPad, iPhone, or iPod Touch	Android phone, tablet PC
iOs of 6.1 or higher	Android OS of 9.0 or higher
A WiFi or cellular network connection	A WiFi or cellular network connection

The FieldFox app communicates with FieldFox via a network connection, so both the iOS/Android device and FieldFox need to be on a network where both devices can reach the other. For example, a company intranet or a site installation using a wireless router. FieldFox can directly be connected to a LAN cable, or if wired LAN is not available, a user supplied wireless router can be configured to work with FieldFox. FieldFox does not include a wireless router.

FieldFox app without Option 030

The FieldFox app can be installed on an iOS or an Android device independent of the presence of Option 030 on the analyzer. Without Option 030, users can view the live display screen of their FieldFox remotely but cannot control the instrument. With 030 purchased and installed on their FieldFox, users can both view and control their FieldFox. Control refers to the ability to press hard keys, softkeys, make or change measurements, etc. Option 030 does not include the iOS or the Android device itself. Users must supply their own iOS or Android device. Option 030 is a license on the FieldFox analyzer. Option 030 and the FieldFox app are not applicable to BlackBerry, or Windows phone/tablet devices. FieldFox can be remotely controlled via PC software using a wireless or wired LAN connection. FieldFox Data Link software provides a remote display tool with a virtual keypad that allows remote access to the FieldFox display (Option 030 not required).

EMI measurements (Option 361)

	Description
Frequency range	Same as spectrum analyzer frequency range
Number of traces	4, each trace can be configured with individual trace mode and detector type
Trace mode	Max hold, Min, Clear/Write, View and blank. (Average is implemented as EMI average detector)
Detector	Positive Peak, Quasi-Peak, EMI average
CISPR bandwidth	200 Hz, 9 kHz, 120 kHz, 1MHz
Measurements	Frequency scan, CISPR 16-1-1 Amplitude probability distribution (APD)

Pulse Generator (Option 357)

Using the built-in pulse generator, FieldFox is transformed into a handheld signal generator which generates a variety of user-definable pulse sequences and continuous-wave signals with or without analog modulation up to 54 GHz.

This product has been type tested to meet the requirements for operation in explosive environments in accordance with MIL-STD-810G, Method 511.5, Procedure I.	
Power supply	
External DC input	15 to 19 VDC, 4 amps maximum when battery charging
External AC power adapter	Efficiency level VI
Input	100 to 240 VAC, 50 to 60 Hz, 1.5 to 0.75 A
Output	15 VDC, 6 A
Power consumption	16 to 30 watts (typical) Battery consumption depends on battery saver selection, measurement mode and temperature.

Battery

Lithium ion	10.8 V, 6.4 A-h, 70 Wh
Operating time	4 hours (typical), mode dependent
Charge time	A fully discharged battery takes about 1.5 hours to recharge to 80%. Four hours to 100%.
Discharge temperature limits	-10 to 60 °C, ≤ 85% RH
Charge temperature limits	0 to 45 °C, ≤ 85% RH
Storage temperature limits	-20 to 50 °C, ≤ 85 % RH
	The battery packs should be stored in an environment with low humidity. Extended exposure to temperatures above 45 °C could degrade battery performance and life.
Test port connectors	
Input impedance	50 Ω
Connector type	
≤ 18 GHz models	Type-N (f)
26.5 GHz models	3.5 mm (m) for FieldFox microwave analyzer, N9918B. On FieldFox SA N9938B, you may choose 3.5 mm (m) by ordering option N9938B-100 or Type-N (f) by default. Type-N (f) port connector is not available for the 26.5 GHz microwave analyzer, N9918B.
32, 44, 50 GHz models	NMD 2.4 mm (m), torque 0.90 Nm or 8 in-lb, use torque wrench N9910X-886
54 GHz models	NMD 1.85 mm (m), torque 0.90 Nm or 8 in-lb, use torque wrench N9910X-886
Display	6.5” transflective color LCD-LED backlit
Headphone jack connector	3.5 mm (1/8 inch) miniature audio jack
USB-A, 2-ports	Hi-speed USB 2.0
Mini USB, 1 port	Hi-speed USB 2.0; used for SCPI programming; USBTMC (USB IEEE488)
Keyboard	USB keyboards are supported (user must supply their own keyboard)
LAN	
Connector	RJ-45
	Used for programming, data saving, remote control, and connection to DataLink software
N991xB, N993xB, N995xB, N996xB	1000/100/10 base-T (auto switching)
	SCPI over LAN using sockets and VX11 (LAN IEEE488); HTTP
Programming	SCPI, using the built-in LAN interface, PathWave BenchVue
Languages	English, Spanish, German, Italian, French, Russian, Japanese, Chinese, Turkish, Korean, and Portuguese
Preset	User preset for both mode preset and complete system preset

Limit lines

The limit line capabilities listed in this section apply to the cable and antenna analyzer, network analyzer and spectrum analyzer modes in all FieldFox analyzers.

- Limit lines can be a combination of horizontal lines, sloping lines, or discrete data points
- Limit types: Fixed or relative
- Each trace can have its own limit line
- Limit lines can be built from a current trace
- Limit segments > 100, limited by memory size
- Max limit line number of points: 10,001
- Beep: Beep off, Beep on fail, Beep on pass
- Pass/fail warning: on/off
- Offset and margin: An increase or decrease in the limit line
- Save/recall limit lines

Data storage	
Internal	Internal Minimum: 4 GB Minimum states and traces: 1000
External	Supports USB 2.0 compatible memory devices and SD/SDHC memory cards with FAT and exFAT format
Data types	Trace, trace+state, picture (png), data (csv), S1P, S2P

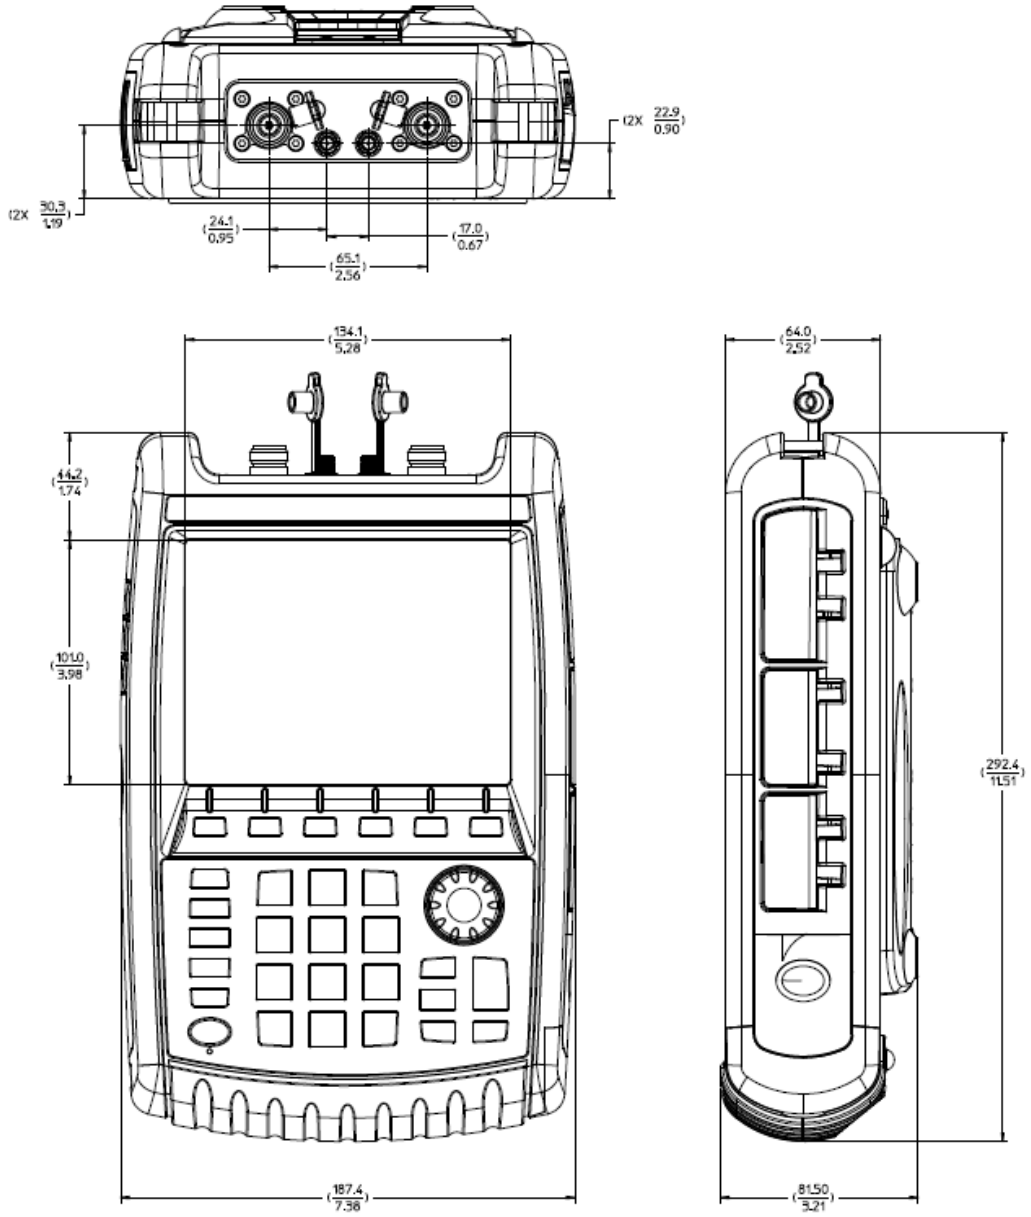
Secure operation	
Frequency blanking	For protection of sensitive data all frequency information can be turned off.
Erase user data	All user data can be erased on a FieldFox analyzer. For more information visit: http://www.keysight.com/find/securefieldfox

Reference OUT/trigger OUT	
Connector	SMB (m), 50 Ω
Output amplitude	≥ 0 dBm
Frequency	10 MHz (1 + frequency reference accuracy)
Trigger out	Reserved for future use; currently only used for ERTA 2-box handshaking

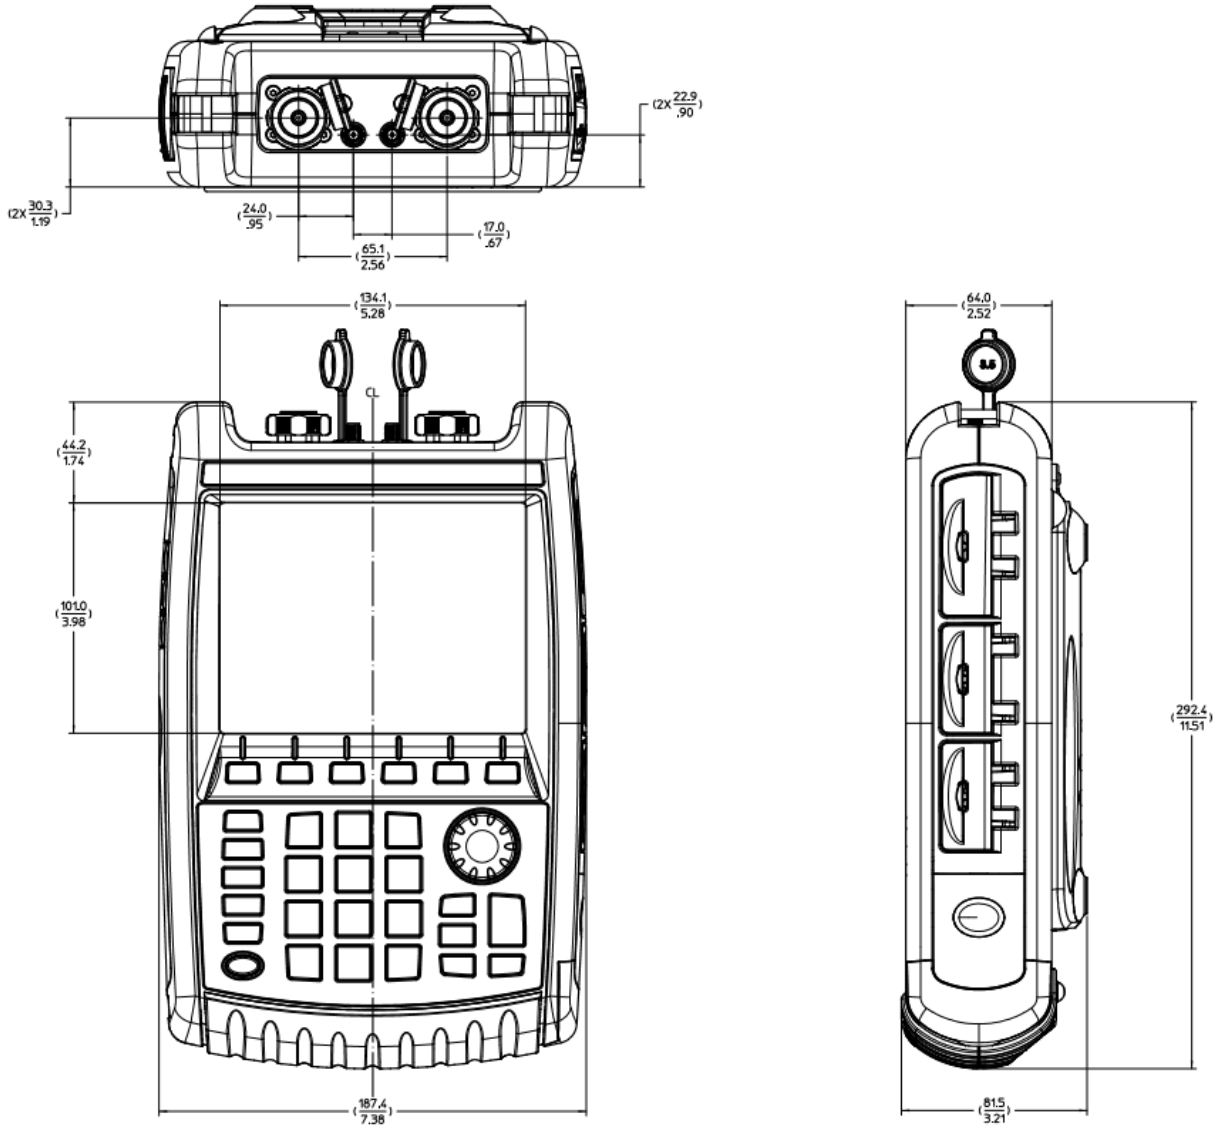
Reference IN/trigger IN	
Connector	SMA (f), 50 Ω
Reference input	10 MHz, -5 to +10 dBm
Trigger input	3.3 or 5 V TTL logic levels

FieldFox Physical Dimensions

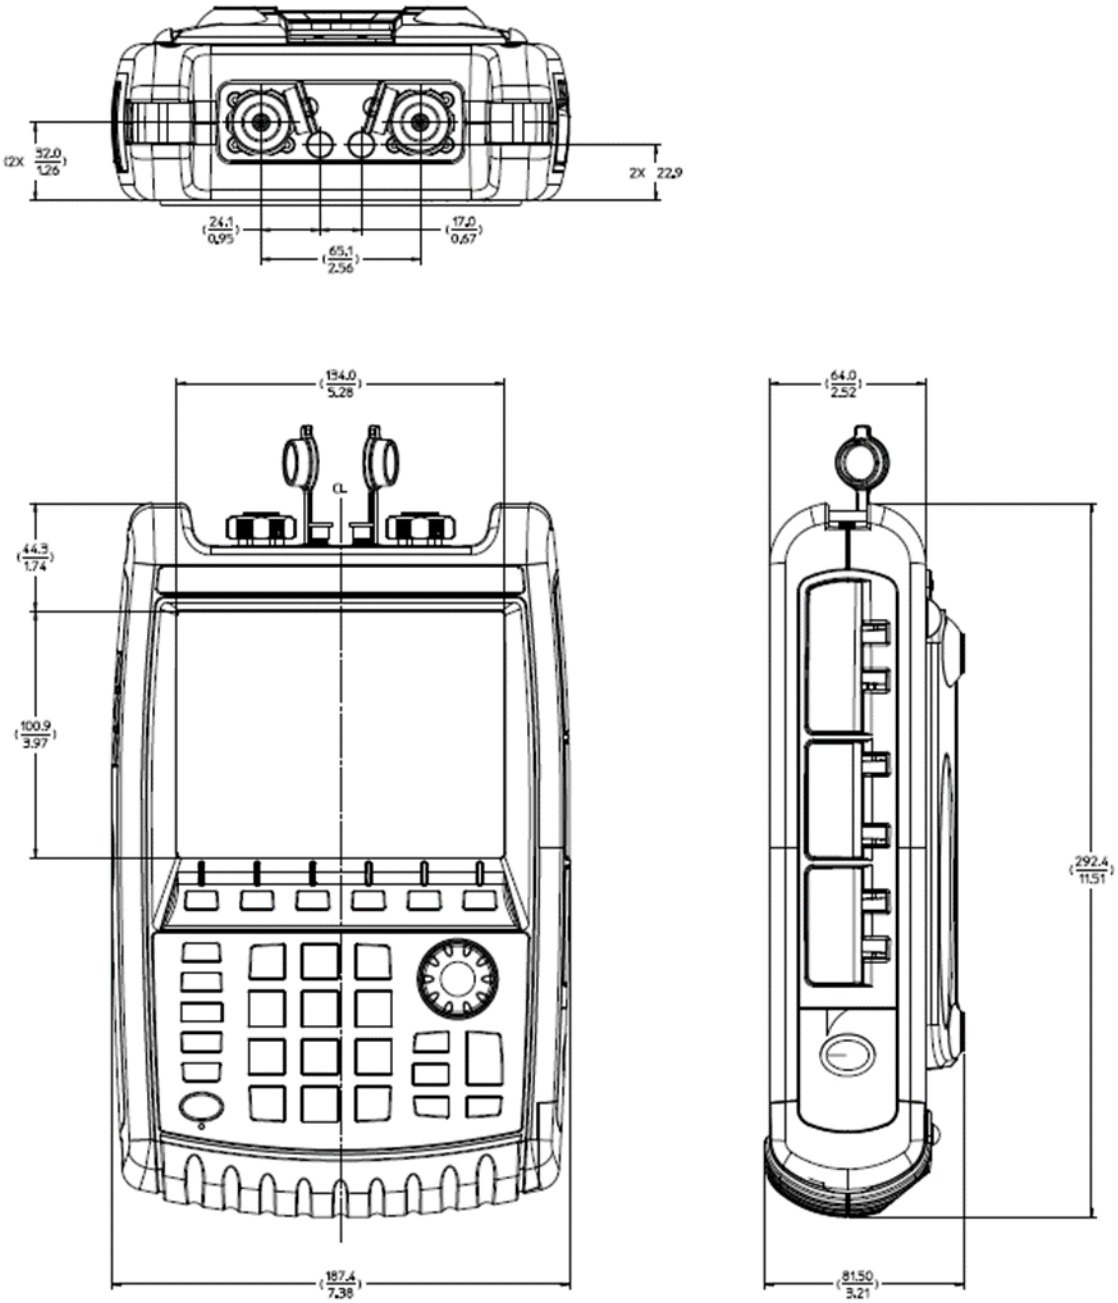
FieldFox models with Type-N test port connectors



FieldFox models with 3.5 mm test port connectors



FieldFox models with 2.4 mm test port connectors [1]



1 Physical dimension measures shown in this drawing are also applicable to the FieldFox models with test port connectors of 1.85 mm (N9953B/N9963B).

Carry Precision with You

Every piece of gear in your field kit had to prove its worth. Measuring up and earning a spot is the driving idea behind Keysight's FieldFox analyzers. They're equipped to handle routine maintenance, in-depth troubleshooting, and anything in between. Better yet, FieldFox delivers precise microwave measurements—wherever you need to go. Add FieldFox to your kit and carry precision with you.
