# Definitions

The specifications in the following pages describe the warranted performance of the instrument for 23  $\pm 5$  °C after a 30-minute warm-up period.

**Min / Max:** Parameter range that is guaranteed by product design, and / or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

**Typical:** Expected mean values, not warranted performance.

# Introduction

## Multi-output ultra-low phase noise wideband frequency synthesizer with USB and LAN interface

The FS1 Frequency Synthesizer (AP4022A) is a multi-channel / multi-output, wideband, ultra-low phase noise frequency synthesizer with USB and LAN interface, settable from 100 kHz (8 kHz with Option MFE) to 40 GHz.

The product is available with 1, 2, 3, or 4 fully independently configurable outputs. Frequency, output power, phase, and modulation can be set independently for each output channel.

The settable output power range is from -5 to +25 dBm.

The FS1 Frequency Synthesizer has a milli-Hz frequency resolution and uses a high-stability OCXO internal reference. The reference can be phase-locked to a 10 or 10 MHz external reference. With option 1ER, a user-settable range from 1 to 250 MHz is available.

For highest phase coherence, multiple FS1 Frequency Synthesizers can be cascaded with just one master reference clock.

When ordered with option 1EH, the FS1 Frequency Synthesizer provides excellent harmonic rejection even with a full output power.

The FS1 Frequency Synthesizer offers dedicated sweeping capabilities with switching speeds of only 500  $\mu$ s (20  $\mu$ s with Option UNZ) and internal phase and narrow pulse modulation.

The module has USB and LAN interfaces (optionally also GPIB) and can be controlled using the SCPI-1999 command set.
